Collaborative Software Development Using IBM Rational Team Concert

Modern development environments support continuous integration, defect tracking, agile planning at multiple levels (release, sprint), continuous build engines, and visibility to all this information through dashboards and event notification. Most software environments have evolved with point solutions, requiring (sometimes significant) additional work to configure, integrate, and administer these independent tools. Additional work slows development teams and inhibits their ability to deliver business value.

Rational Team Concert (RTC) automates those development best practices above in a single, integrated, but customizable out-of-the-box solution. Using RTC, teams can start projects in minutes and reduce tool management time to almost zero. RTC integration enables automation of common development tasks, ensuring they are performed consistently, in less time, and with fewer errors. Because RTC is simple to stand-up, it scales down to an organization's small teams but also scales up to their large projects (2,000+ simultaneous users). RTC is built on standards and provides connectors that integrate with other common development tools – SVN, Git, CVS, Bugzilla, Jira, and CruiseControl to name a few.

Join Rocket Gang for this free, *hands-on* workshop that shows how teams can increase their development productivity and automate agile development practices using Rational Team Concert.

WHERE:

Southfield, MI
(Detroit area)

WHEN:

Friday, June 24th, 2011
8:00 a.m. Registration
8:30 a.m. – 5:00 p.m. Workshop

Seating is
limited to 15!

AUDIENCE:

Software Developers, Testers, Product Owners, Scrum Masters and Team Leads. No prerequisite knowledge is required.

COST: FREE

SCHEDULE

Registration and continental breakfast will begin at 8:00 a.m. Lunch will be provided. The session starts at 8:30 a.m. and ends at approximately 5:00 p.m.

AGENDA

- Module 1 - Setting up the team
- Module 2 - Planning the team's work
- Module 3 - Keep track of my work
- Module 4 - Performing and sharing work with team
- Module 5 - Managing SCM configurations
- Module 6 - Automated builds
- Module 7 - Exploring traceability automation
- Module 8 - Changing the team's process
