Subject: Thank You for Coming to The Interview

Dear Mr. Mason,

Thank you very much for spending some of your valuable time today for the interview. It was very nice meeting and talking to you. You have provided me with a lot of information and interesting applications in the field of systems engineering. Your example about the health care system that we discussed has truly broaden my views how powerful the concept of systems thinking is. I am ready to share all these interesting information with my fellow classmates in our upcoming presentation.

Once again, thank you Mr. Mason. I hope to see you again soon in one of the INCOSE meetings.

Sincerely,
Ken Truong

Ken
It would help the team discussion if you review the INCOSE book at <http://www.incose.org/ProductsPubs/communityresources.aspx> this can be downloaded for free.

Mr. Mason,

There is a public parking lot (across the King Library) on the corner of Fourth St. and San Fernando St. I believe it is free to public after 6 pm.

Ok sounds good.
I'll see you then.
Is guest parking nearby?

Dear Mr. Mason,

I have reserved a meeting room at King Library, and here are the details:

Location:	Dr. Luther King Library
Address:	150 E. San Fernando St., San Jose, CA 95112
Room:	324 (3 rd Floor)
Date:	Tuesday, February 24 2009
Time:	7:00 pm – 8:00 pm

Best,

Ken

Ken
Due to security issues meeting at Lockheed is a challenge. Better to meet with you at an alternate

location. Can you arrange a meeting room, maybe the library?

Dear Mr. Mason,

Two of my other interested classmates will join me in the interview. Having noticed that Mr. Mason and some other officers are professional systems engineers at Lockheed Martin, we all think that it will be great if we can set up an interview with you at **7 p.m.** on this coming **Tuesday (02/24/09)** at **Lockheed Martin** so that we can also see what the work environment of a systems engineer really is. Please let me know if you prefer other time or meeting location. Once again, thank you Mr. Mason for spending your valuable time for this interview.

Sincerely,

Ken Truong

Ken

I would be honored to have an interview with you. I am also interested in starting a student division at SJSU. I propose an evening to perform your interview and to express the benefits to start a student division with you and your other interested class mates. If you arrange an evening to meet I, and other professionals, will come. Let me know

Subject: San Jose State University Industrial & Systems Engineering Student Interview For Class Project
February 19, 2009

Dear Mr. Mason,

My name is Ken, and I am currently a junior at San Jose State University majoring in Industrial and Systems Engineering. I have found that this semester has been very interesting as well as challenging since the depth of materials and projects that I need to master in all my

upper-division courses. Among those, a course of systems engineering has broaden my eyes of this field for its wide applications and powerful effects to almost every industry.

We are currently working on a class project – interviewing practitioners and professional engineers. Each one of us then will share the information and learning from the interview to other fellow classmates. Curious about the opportunity and development in the field of systems engineering, I decide to ask for advice from professional organizations like International Council on Systems Engineering (INCOSE). I wonder if I can set up an interview with you or any other officers either at your office or over the phone (at your convenience). I believe that the interview and advice received from you will definitely encourage not only me but also my fellow classmates when I share the information with them about the field of systems engineering.

I hope that you can take out some of your valuable time for this interview. I am looking forward to hearing your response. Thank you very much Mr. Mason!

Sincerely,

Ken Truong
