**Mission**

Advocate systems engineering to students around the world.

**Vision**

The INCOSE vision is to be the world’s premier organization advancing the art and practice of systems engineering. The Student division complements this vision by providing students opportunities to publish and present trending research in systems engineering from around the world.

**Realizing the Vision**

The Student Division makes this a reality through the development of a student division at each university using the 4-Way Benefit Model stakeholders dedicated to:

- Collaborate education, research, and enterprise engineering trends for the mutual benefit of all stakeholders and society.

An Engineering Challenge is the catalyst to establish a mentoring network at the university to:

- Bring systems engineering to life through applied projects.
- Integrate professional mentors
- Merge real-world problems and curriculum to extend education beyond the classroom.

The Student Division architecture is optimized to reach all areas of the INCOSE organization:

- Corporate Advisory Board
- Academic Matters
- Sponsoring Chapters
- INCOSE Members
