Description: The INCOSE Handbook (p199) describes the DSM (Design Structure Matrix) as follows: "Design Structure Matrix (DSM) is a straightforward and flexible technique that can be used for designing, developing, and managing complex systems. DSM offers network modeling tools that represent the elements of a system and their interactions thereby highlighting the system's architecture (or designed structure.)"

Please join us as we report out the highlights from the recent 17th International DSM Conference and explore how DSM technology can be used in your Systems Engineering work.

We will meet in the auditorium on the first floor - please bring your own food/drinks.

The meeting is **free** and **open** to the public.
