Charter Summary

2019
Annual **INCOSE**
international workshop
Torrance, CA, USA
January 26 - 29, 2019

WG PURPOSE/MISSION

The purpose for the Critical Infrastructure Protection and Recovery (CIPR) Working Group (WG) is to provide a forum for the application, development and dissemination of systems engineering principles, practices and solutions relating to critical infrastructure protection and recovery against manmade and natural events causing physical infrastructure system disruption for periods of a month or more.

Critical infrastructures provide essential services underpinning modern societies. These infrastructures are networks forming a tightly coupled complex system cutting across multiple domains. They affect one another even if not physically connected. They are vulnerable to manmade and natural events that can cause disruption for extended periods, resulting in societal disruptions and loss of life.

The inability of critical infrastructures to withstand and recover from catastrophic events is a well-documented global issue. This is a complex systems problem needing immediate coordinated attention across traditional domain and governmental boundaries. For example, the US President issued Presidential Policy Directive PPD-21 that addresses "a national unity of effort to strengthen and maintain secure, functioning, and resilient critical infrastructure." This includes an imperative to "implement an integration and analysis function to inform planning and operations decisions regarding critical infrastructure." This working group will seek to support this and other policies with international reach.

INCOSE, as the premier professional society for systems engineering, can provide significant contributions toward critical infrastructure protection and recovery.

WG GOAL(S)

This WG will provide and support opportunities to exchange knowledge and systems engineering information and solutions within the scope of the CIPR WG, both within INCOSE and with external organizations sharing similar interests and goals. The opportunities include systems engineering products (e.g. architectures, requirements, IV&V, etc.). This information will be disseminated through publications (papers, articles, briefings) and supporting meetings, conferences, panels, and other means.

Charter Summary

2019
Annual **INCOSE**
international workshop
Torrance, CA, USA
January 26 - 29, 2019

Specific areas of knowledge include the following.

- a) The events capable of causing infrastructure disruption for periods of a month or more, to include all aspects of their characteristics and impacts.
- b) The socio-technical factors related to CIPR.
- c) The overarching structure and inter-connectedness among the critical infrastructure domains.
- d) The interaction among infrastructure systems under various degraded states of operation.
- e) Possible conceptual and design solutions, and related information.
- f) Strategies for verification and validation of solutions.

The CIPR WG will provide a collection of systems engineering and related products that provide understanding and solutions for domain stakeholders impacted by the events. This can include products developed by several working groups and initiatives, such as Architecture, Complex Systems, Model-Based Systems Engineering (MBSE), Decision Analysis, Enterprise Systems, Natural Systems, Resilient Systems, Risk Management, Cost Engineering, Human System Interaction, In-Service Systems, Reliability Engineering, Requirements, System of Systems, System Safety Integration, Automotive, Healthcare, Infrastructure, Power & Energy Systems, Transportation Systems, and Anti-terrorism. Other working groups also have knowledge to contribute as well. The CIPR WG will endeavor to integrate and coordinate among standards, regulations and best practices of the impacted industries. It will also provide the organizing and development functions to establish new concepts and standards addressing CIPR. Stakeholders with interest in CIPR are international and include all levels of government, defense and security agencies, critical infrastructure domain businesses and agencies, and society in general (e.g. regions, communities and citizens).

WG SCOPE

Certain manmade and natural events have a known potential to affect societies at a national, continental or even global scale. Such events can cause extreme harm well beyond those experienced from regional catastrophic events, especially when the effects will take longer than a month to recover. Three examples of events with the potential to cause critical infrastructure collapse include Solar Storms caused by Coronal Mass Ejections (CME), Electromagnetic Pulse (EMP) and Cyber Events (intentional and otherwise). The CIPR WG will pursue its goals by addressing these three classes of events, and other classes of events with similar potential, when identified.

The CIPR WG will promote and apply systems engineering principles with emphasis on policy, analysis and concepts useful to understand, protect and recover existing operational infrastructure, and to provide strategies, standards and concepts for more

resilient approaches. It will promote and perform activities supporting the stated goals.

This scope is synergistic with other INCOSE WGs identified above (e.g. MBSE, System of Systems, Resilient Systems, Power & Energy, etc.). For example, the application of model-based approaches will be essential to analyze the problem and to communicate alternative conceptual solutions. Therefore, this WG will seek interest and participation from INCOSE members and the other INCOSE WGs. It will also reach out to engage international and governmental organizations, professional groups, critical infrastructure providers, and others stakeholders. MOUs, contracts and other kinds of agreements may be sought with external organizations as needed to further the effort. These agreements, if any, will be established according to INCOSE guidelines, processes and procedures.

The critical infrastructure domains addressed by the CIPR WG include the following. Other domains may be addressed as the need is identified.

- 1) Chemical and other industrial bases
- 2) Communications
- 3) Electrical & Energy production and distribution
- 4) Emergency Services
- 5) Financial Services
- 6) Food and Agriculture
- 7) Government Services & Facilities
- 8) Healthcare and Public Health
- 9) Information Technology
- 10) Nuclear Reactors, Materials, and Waste
- 11) Transportation
- 12) Water storage, treatment and distribution
- 13) Waste handling and disposal (water, refuse, hazardous)
- 14) Society at large

Planned Work for IW

2019
Annual **INCOSE**
international workshop
Torrance, CA, USA
January 26 - 29, 2019

CIPR Working Group - 2018 Recap and Plans for 2019

Sun 27 : 13:00-15:00

CIPR working group discussion / recap of 2018 achievements and planning for 2019 goals and activities.

CIPR Working Group Modeling Activities - Microgrids; Resilient Hospitals

Sun 27 : 15:00-17:00

Discussion of CIPR working group modeling activities that includes involvement and outreach to P&E and OOSEM working groups. Plans for path forward for the current two modeling efforts, and discussion of other modeling efforts to undertake in 2019.

CIPR Working Group - 2019 Publications Planning

Mon 28 : 10:00-12:00

CIPR Working Group discussion and planning for 2019 publications. These include: 1) CIPR Primer 2) Appendix to InfraGard's "Powering Through 2.0" 3) CIPR-themed volume of INCOSE INSIGHT

CIPR Working Group - Inter-working group collaboration

Mon 28 : 13:00-15:00

Open meeting to discuss inter-working group collaboration and project plans. Members / representatives from any of the working groups are invited.

CIPR Working Group - EnergyTech 2019 Planning

Mon 28 : 15:00-17:00

Meeting between CIPR, OOSEM, and P&E working groups to discuss and plan EnergyTech 2019.

CIPR Working Group - Leadership Meeting

Tue 29 : 10:00-12:00

CIPR Leadership planning meeting.

CIPR Working Group open session

Tue 29 : 13:00-15:00
