## CSRM HTML

---

The purpose of this memo is to illustrate using the containment tree to navigate the CSRM HTML

A link to an HTML version of CSRM:

<http://pulsar.orbitaltransports.com/csrn/>

The CSRM provides navigation by linking packages to package diagrams.

Cameo provides a useful but unsupported capability to generate a HTML version of the CSRM.

That allows someone to get acquainted with the CSRM using just a browser.

However, some of the package - package diagram links do not survive the conversion to HTML

However,<sup>2</sup> navigation can be initiated in the containment tree.

Below are screen captures of the containment tree with arrows pointing to the package diagrams.

### SysML Package Diagram CSRM Overview and Navigation

The diagram shows a package structure for the CSRM. A large package labeled '01 - CubeSat System Reference Model' contains eight sub-packages: '1 - Stakeholders', '2 - Technical Measures', '3 - Behaviors', '4 - Requirements', '5 - Architecture', '6 - Data Models', '7 - Validation Verification', and '8 - CSRM Population'. A note on the right states: 'This package contains the CSRM core. Additionally, there are links to the examples and illustrations. You are free to use the elements or delete them if they do not apply to your design.'

### SysML Package Diagram Stakeholders

pkg [Package] 1 - Stakeholders[ Stakeholders ]

```

graph TD
    1[1 - Stakeholders] --> 1.1[1.1 Regulatory Agency Stakeholders]
    1 --> 1.2[1.2 Mission Stakeholders]
    1 --> 1.3[1.3 CubeSat Deployer Systems]
    1.1 --> 1.1.1[1.1.1 - Regulatory Agency Stakeholders]
    1.1 --> 1.1.2[1.1.2 - Regulatory Agency Stakeholders Concerns]
    1.1 --> 1.1.1.Ex[1.1.1 - Regulatory Agency Stakeholders - Examples]
  
```

«Explanation»  
There are two modeling efforts. One is the SSWG developing a CubeSat Reference Model with its logical architecture. The other is a team eventually taking the CubeSat Reference Model as a basis for its mission-specific logical and physical architectures.

«Explanation»  
A stakeholder is any entity that has an interest in the system. Some are interested in the models themselves and others are interested in the missions that can be realized from the mission-specific instantiations of the model, and some have interests in both.

Containment Diagrams

Diagram Specification Appears in

SysML Package Diagram Mission Stakeholders - Requirements, Technical Measures, Use Cases - Illustration,

pkg [Package] 1.2.2 - Mission Stakeholders - Requirements, Technical Measures, Use Cases - Illustration

«Explanation»

A stakeholder concern can be manifest in many forms, such as in relation to one or more stakeholder needs, goals, expectations, responsibilities, requirements, design constraints, assumptions, dependencies, quality attributes, architecture decisions, risks or other issues pertaining to the system.

There can be a number of stakeholders and a number of concerns.

The needs, objectives, constraints, and requirements result from review, assessment, and integration of the varied concerns.

«Explanation»

The CubeSat System Reference Model has model elements for:

- stakeholder(s), concern(s)
- mission need(s), mission objective(s), mission constraint(s)
- mission requirement(s)

These model elements and their relationships are mission and engineering methodology specific.

The mission and methodology may dictate starting with stakeholder concerns

Or starting with mission objectives and mission constraints

Or a simpler approach of starting with just mission requirements

«Explanation»

This terminology is consistent with a number of well established and accepted references. The user of the CSRM should establish terminology (and then model elements) as needed for their stakeholders and mission.

«Mission Stakeholders - Requirements, Technical Measures, Use Cases - Illustration»

«comment»

The relationships between elements are captured in the element specifications and containment tree. Those relationships are displayed and maintained in diagrams and tables as shown below

«Stakeholder» Stakeholder Name

«StakeholderConcern» Stakeholder Concern Name

«MissionNeeds» Mission Need Name

«MissionObjective» Mission Objective Name

«MissionConstraints» Mission Constraint Name

«MissionRequirements» Mission Requirement Name

«MissionUseCase» Mission Use Case

«Measure of Effectiveness» Measure of Effectiveness Name

«SegmentRequirements» Segment Requirements

Diagrams

Diagram Specification Appears in

SysML Package Diagram Requirements Hierarchy - Population

pkg [Package] 4 - Requirements Requirements Hierarchy - Population

4 - Requirements

L1 Enterprise Rqts

L2 Segment Rqts

L2.1 Space Segment Rqts

L2.2 Ground Segment Rqts

L2.1.1 CubeSat Rqts

L3 Subsystem Rqts

L3.1 CubeSat Subsystems Rqts

L3.2 Ground Subsystems Rqts

L4 Component Rqts

L4.1 CubeSat Subsystems Components Rqts

L4.2 Ground Subsystems Components Rqts

«Explanation»

The requirement elements reside in the containment tree. The requirement tables are views of the requirement elements. A table can be deleted but the requirement elements and their hierarchy remains.

Requirements are added to the table using "Add New" or "Add Nested" and the requirement ids are automatically updated.

«Explanation»

Requirement packages are numbered to be consistent with the corresponding architecture packages.

Individual requirements are numbered uniquely according to a prefix based on the name of the requirements packages.

«Explanation»

The modeler can easily change the prefix by Select a requirement in the containment tree and Select Element Numbering

«Explanation»

The requirement element properties include:

Rationale	Traced To	Traced From	Derived From	Verify Method
Verified By	Satisfied By			

«HowTo»

Double-click on the CubeSat, Ground Segment, CubeSat Subsystem, and Ground Subsystem requirement packages to navigate to the requirement tables.

«HowTo»

Double-click on table and add and delete requirements as needed

Click on Add New to add a new requirement to the containment tree and to the table.

Right-click the new requirement in the table, then left-click Select in Containment
