

Psychological Health in the United States Military: Making Sense of What We Know

John Hess
Cody Kamin
Bob Kenley

has anyone seen the
garbage cans out in
the hallway?

The Management Flight Simulator

Figure 1B 400 ppm scenario

Now consider a scenario in which the concentration of CO₂ in the atmosphere gradually rises to 400 ppm, about 8% higher than the level today, then stabilizes by the year 2100, as shown here:

1. The graph below shows anthropogenic CO₂ emissions from 1900-2000, and current net removal of CO₂ from the atmosphere by natural processes. Sketch:
 - a. Your estimate of likely future net CO₂ removal, given the scenario above.
 - b. Your estimate of likely future anthropogenic CO₂ emissions, given the scenario above.
