Introduction

Is Systems Engineering Applicable in all Cultures?

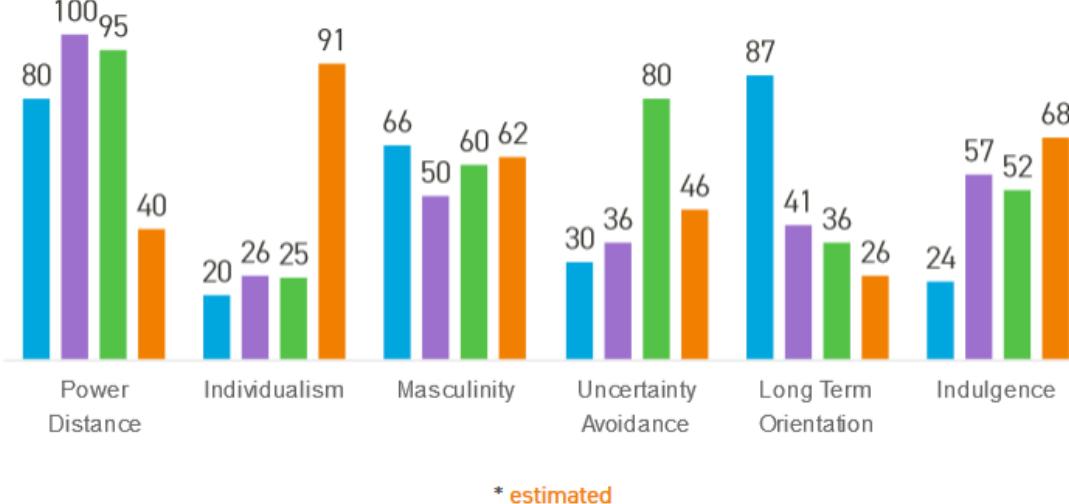

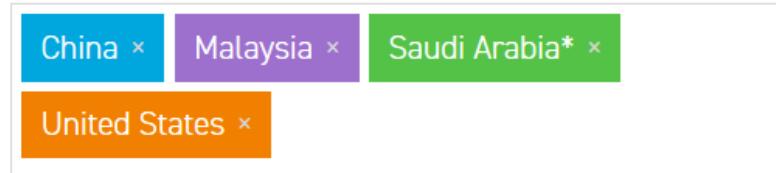

What are the examples of successes/failures of systems engineering implementations outside its original territories? What are those territories?

Culture

Definition of Culture

Culture is an umbrella term which encompasses the social behavior and norms found in human societies, as well as the knowledge, beliefs, arts, laws, customs, capabilities, and habits of the individuals in these groups. (Tylor, 1871)

CULTURAL ICEBERG

When we talk about culture, we focus on "surface culture". These are things that we can see, hear and touch, like music, food, language, art.

This represents only the tip of the cultural iceberg. The biggest part of culture is hidden below the surface. These are values and beliefs that underlie behaviors of people from that culture. The more immersed we become in a new culture, the more these aspects are revealed to us.

As you begin your program and start making new connections, do not judge the new culture only on what is immediately visible. Keep in mind what aspects of "deep culture" exist and how that comes into play. Actively participate in the new culture and take time to see what's below the surface.

Unsuccessful Application: Concurrent Engineering in Japan

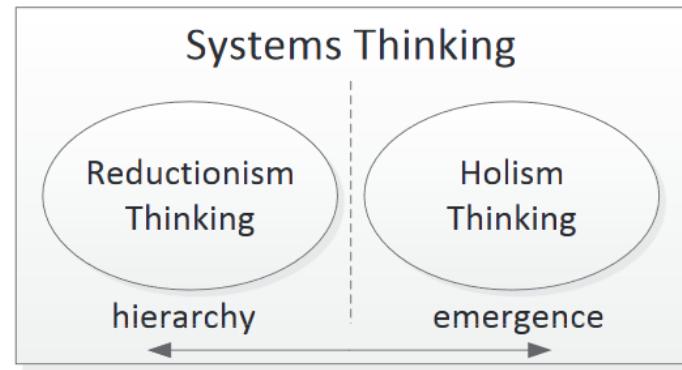

- Japanese Organization working on Satellites
- Tried to apply Integrated Concurrent Engineering (ICE) from 2002-2005, but did not succeed
- Some Reasons:
 - Hesitation for setting tentative design baseline: Chigau = different and wrong
 - Experience dependent
 - US and Europe works under specific job responsibilities but much more clearly than in most of the Japanese organizations.

Ogawa, A., Rhodes, D.H., 2009. 6.3.4 Culture: A Key Factor for Implementing the Integrated Concurrent Engineering Approach. INCOSE International Symposium 19

Western Vs Chinese Systems Engineering

	Hard system approaches	Soft system approach
Objective system	Hard/well defined problem	Soft/ill-structured problem
Assumption of observed system	Systematic world	Metaphor/systemic mind
Problem solving style	End-means	Participation/debate/reform
Process goal	Optimization/satisfaction	Learning/satisfying
Acting focus	Goal-oriented	Process-oriented
Applying methods	Positive-empirical	Interpretive-exploratory
Acting philosophy thoughts	Reductionism/Do the thing right	Holism/Do the right thing

麻雀虽小，五脏俱全。
Small as it is, the sparrow has all the vital organs. (Qian Zhongshu, 1910–1998)

SE Applications

A system – no matter how big or small, simple or complex – is a collection of necessary and interconnected components. This saying highlights the fundamental system concept and principles, and emphasizes the importance of a consistent SE approach.

千军易得，一将难求。
It is easy to find a thousand soldiers, but a general is hard to find. (Yuan Dynasty, 1279–1368)

It stresses the difficulty of finding an outstanding leader, and the criticality of recruiting a critical personnel or leader for any successful project.

当局者迷，旁观者清。
The player confused; the spectator clear (Old Book of Tang, 941–945)

While the person involved in the work may be lost in the details, the independent onlookers, usually calmer and more objective, have a better grasp of what is going on – highlighting the importance of “independent” design/peer reviews

(And by the Mercy of Allah, you dealt with them gently. And had you been severe and harsh-hearted, they would have broken away from about you; so pass over (their faults), and ask (Allah's) Forgiveness for them; and consult them in the affairs. Then when you have taken a decision, put your trust in Allah, certainly, Allah loves those who put their trust (in Him).)

Conclusion

- Culture has a significant influence on SE
- Tailoring process need to be made to insure cultural fit
- INCOSE with its WGs is trying to make an International SE to fit all cultures
- Looking to SE from an Islamic perspective would enhance the practice in Islamic countries, and in all over the world
