

# Architecture starts when you carefully split a system into two subsystems.

## There it begins...

Maarten Bonnema

Full Professor of Systems Engineering & Multidisciplinary Design (SEMD)

University of Twente, the Netherlands

**ARCHITECTURE**  
starts when you carefully put two  
**BRICKS**  
together. There it begins

Ludwig Mies van der Rohe via miragestudio7.com

**Ludwig Mies van der Rohe**  
German-American Architect  
1886 - 1969

We'll be talking about *systems* architectures, but take inspiration from *building* architecture

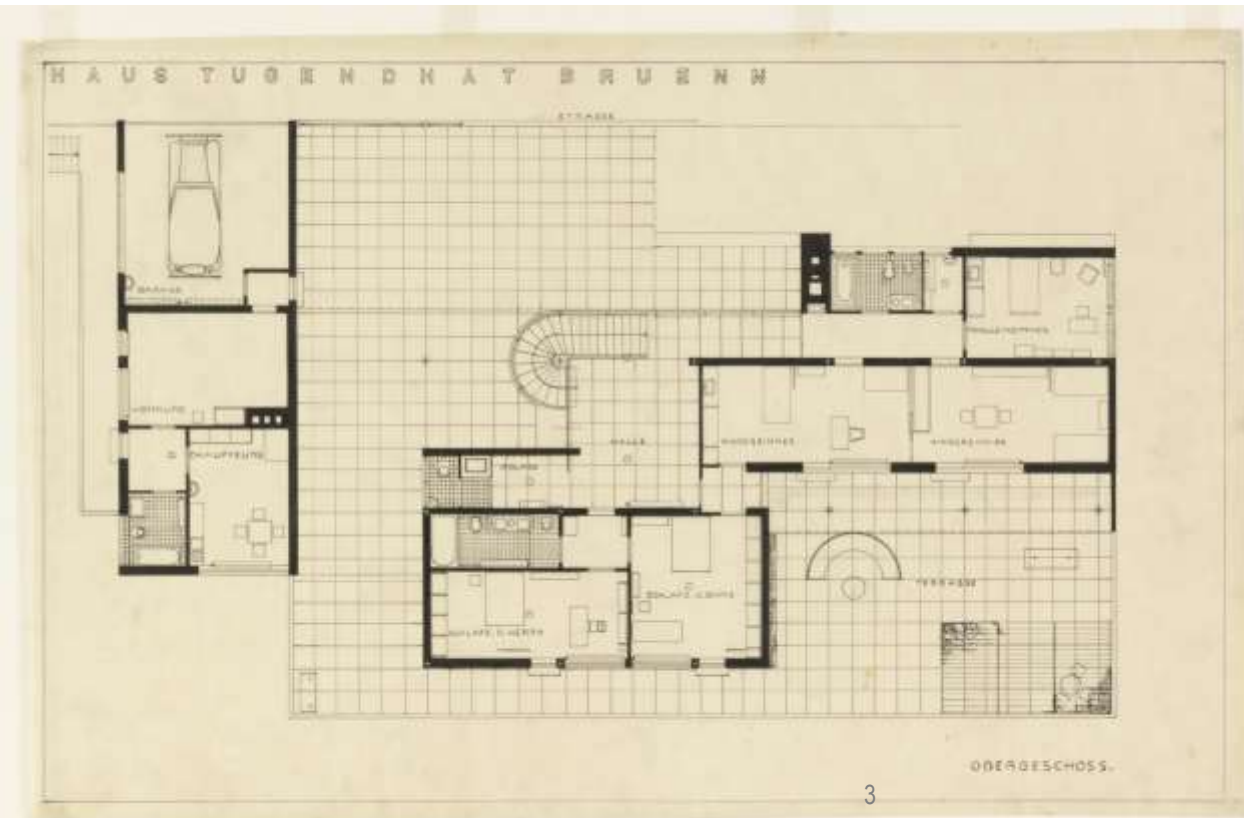

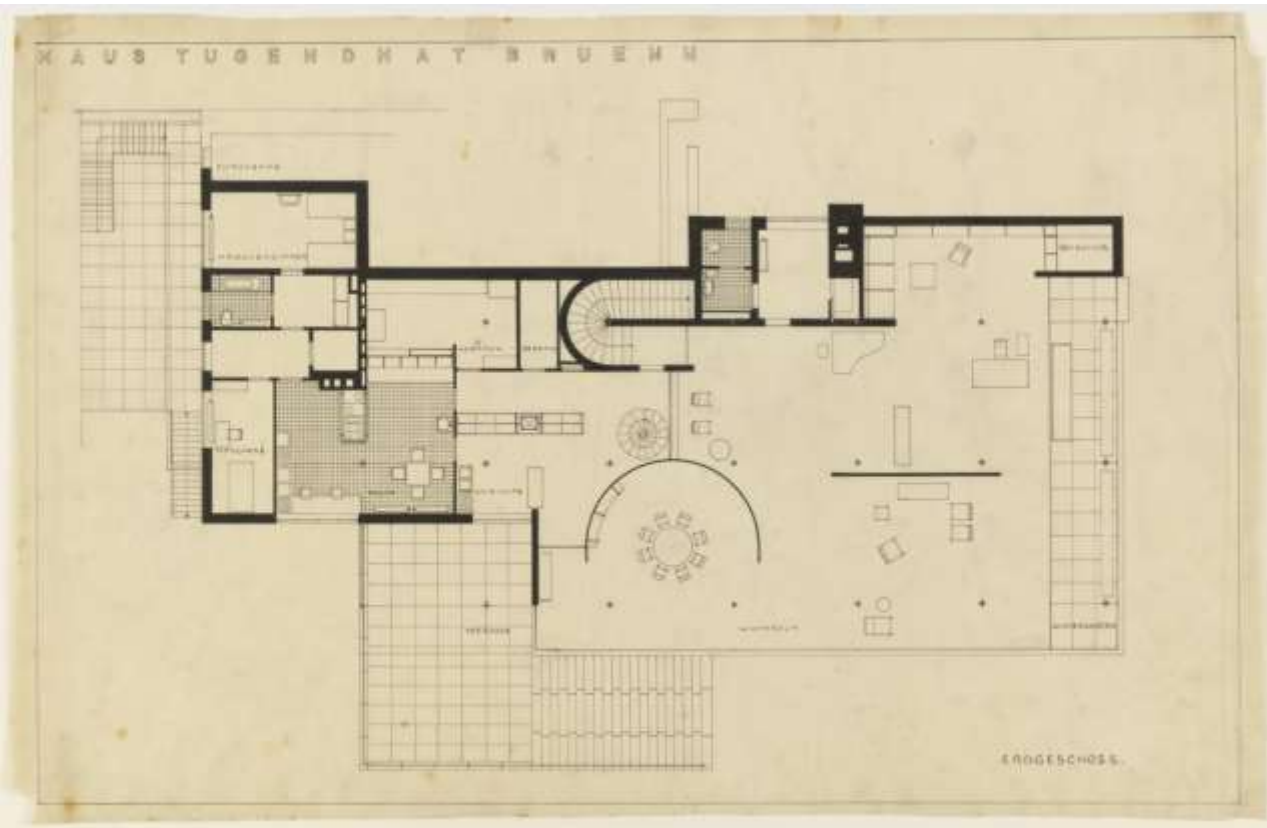

**Architecture starts when you carefully split a system into two subsystems. There it begins...**

# BUILDING ARCHITECTURE

Functions, and their arrangement and allocation to main parts

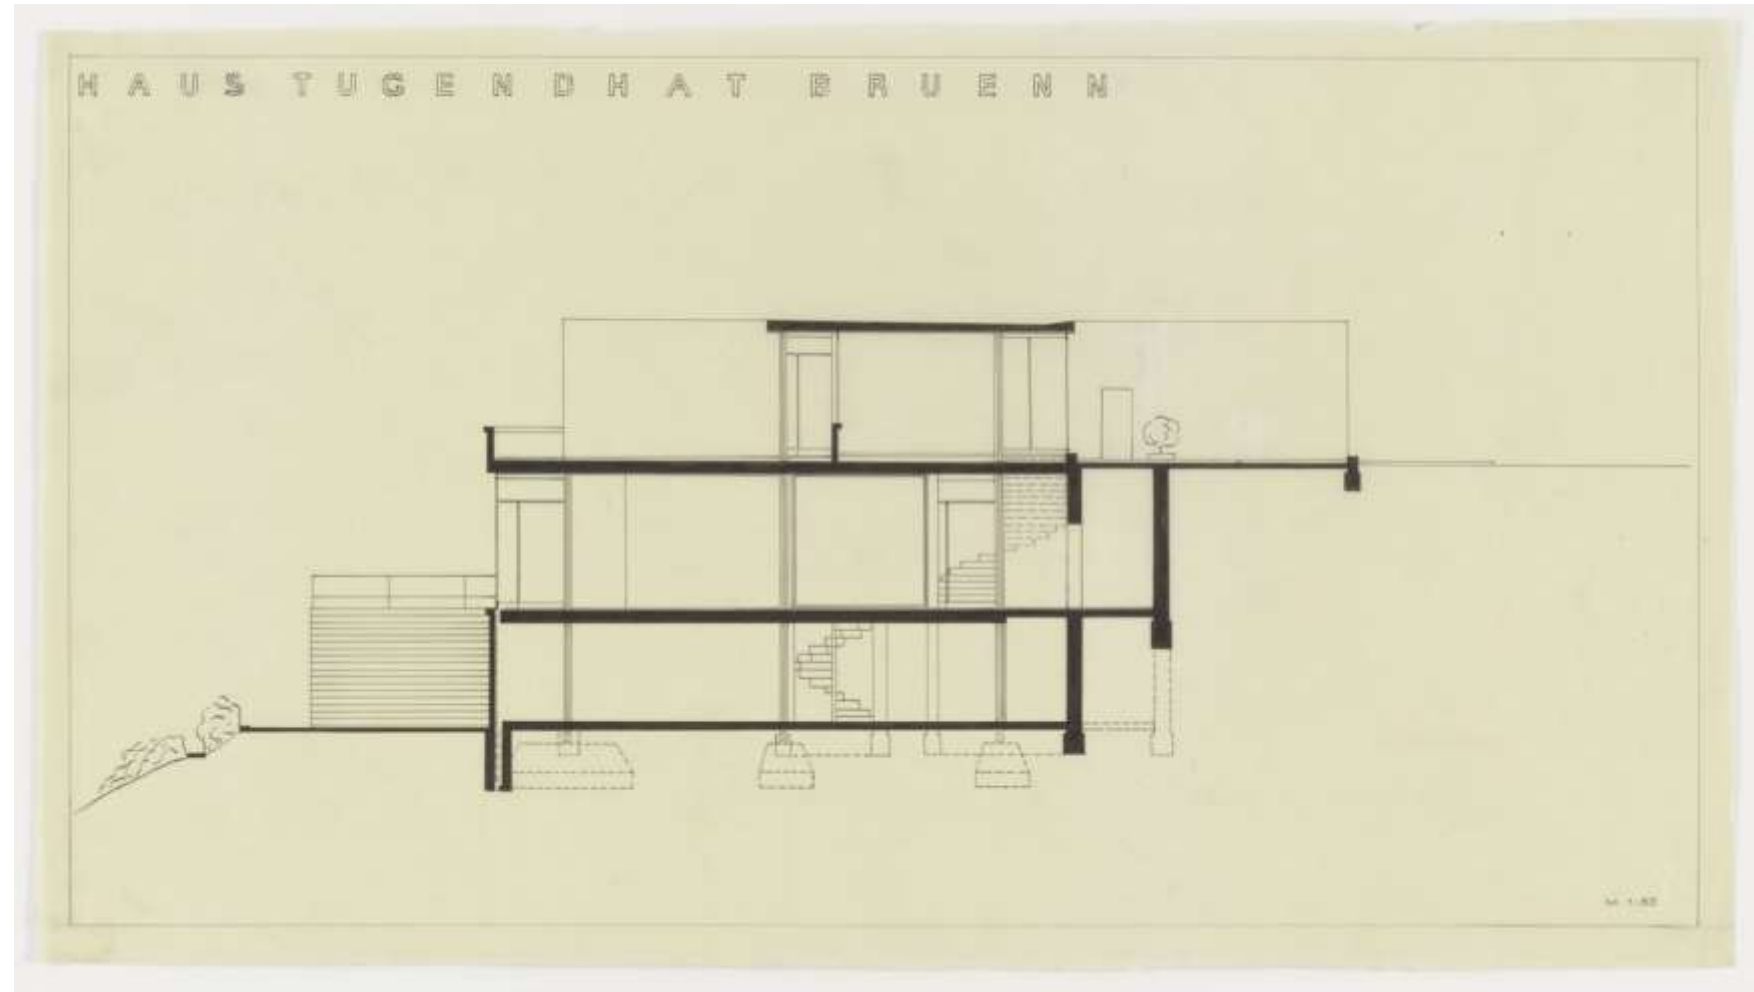

The Tugendhat Haus in Brno, CZ  
by Ludwig Mies van der Rohe

# DEFINITION OF SYSTEM ARCHITECTURE

So more  
than the  
thing we  
build!

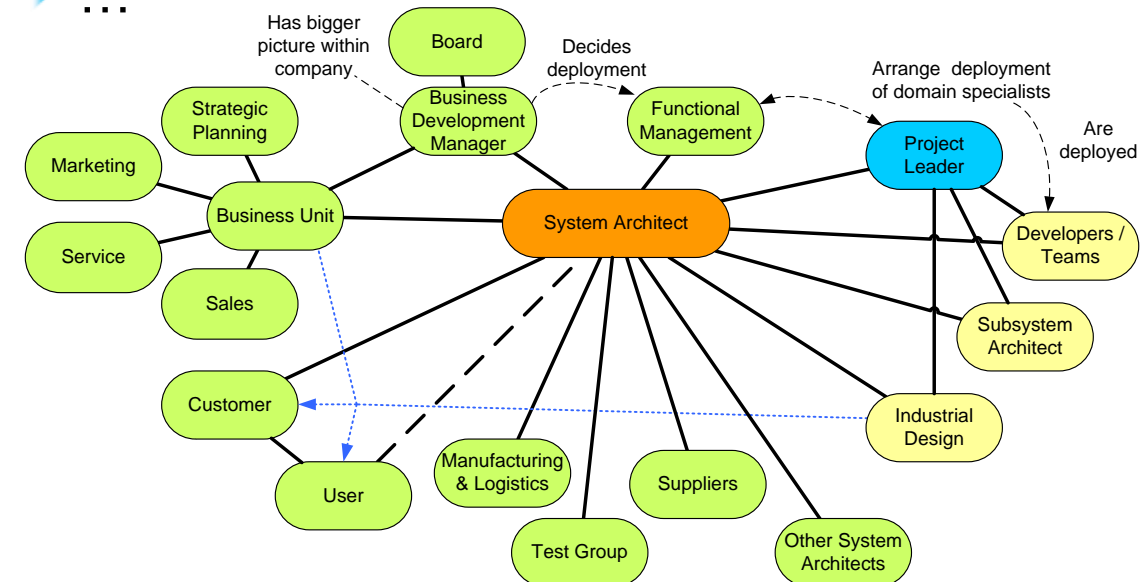

A **System architecture** defines the **parts** constituting a system and allocates the system's **functions** and **performance** over its parts, its user, its super system and the environment in order to **meet system requirements**, and so that **the parts, user(s) and super system** can be **integrated** to **cooperate constructively**.

Adapted from: Bonnema, G. M. (2008). FunKey Architecting - An Integrated Approach to System Architecting Using Functions, Key Drivers and System Budgets. PhD-thesis, University of Twente.

# THE NEED FOR AN ARCHITECTURE

- ▶ When it becomes too large for one person/small team
  - ▶ Division of work
  - ▶ Identification of *Interfaces* (next talk)
  - ▶ Re-use of solutions
  - ▶ Create and maintain the Big Picture
  - ▶ Support reasoning about (the impact of) changes
- ▶ Facilitating Discussions with:
    - ▶ Marketing
    - ▶ Engineering
    - ▶ (End-) users
    - ▶ ...

# ARCHITECTURE AND BUSINESS

Bonnema, G. M. (2008). *FunKey Architecting: an integrated approach to system architecting using functions, key drivers and system budgets*. PhD Thesis. University of Twente.

<https://research.utwente.nl/en/publications/funkey-architecting-an-integrated-approach-to-system-architecting>

Development in architecture (function allocation) brings possibilities for earning money:

- ▶ Gillette
- ▶ Cut salad mix
- ▶ Coffee

- ▶ Different function allocations result in different business opportunities/models
- ▶ QFD or FunKey architecting helps here
- ▶ Mapping the contribution of functions to key-drives

1 kg beans €10 - €20

1 kg ground coffee  
€13 - €20

1 kg Nespresso coffee  
€ 50 - €80

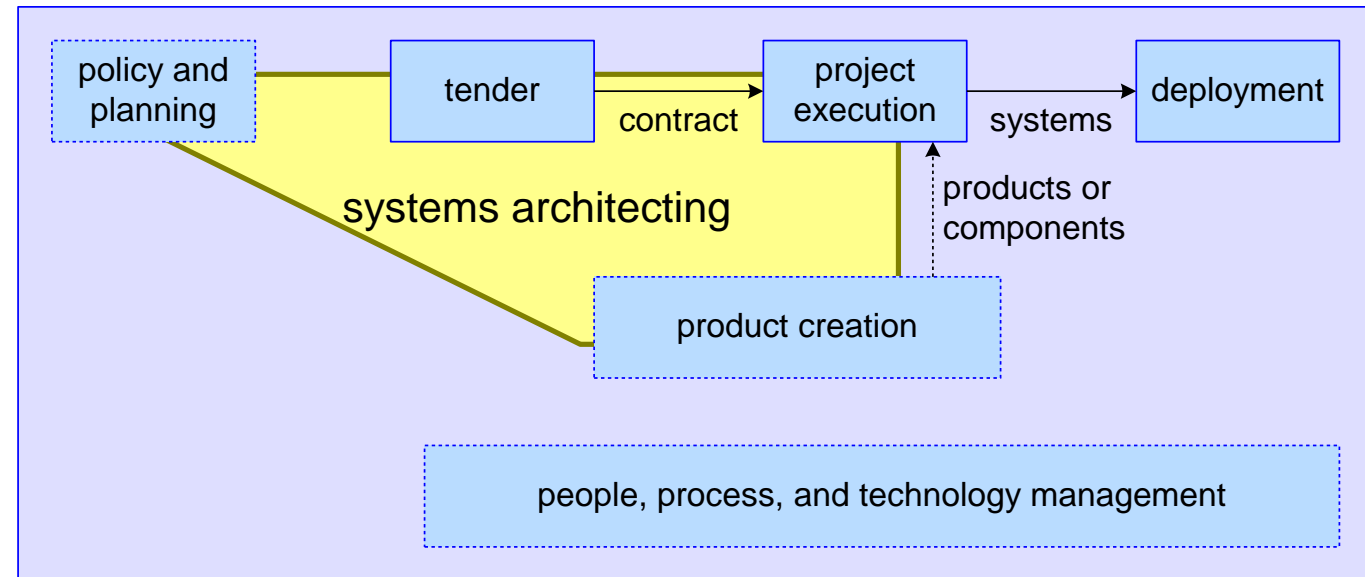

1 kg Senseo coffee € 20 - €25

# ARCHITECTURE: THE BEST WAY TO PREDICT THE FUTURE IS TO CREATE IT (Peter Drucker)

- ▶ The System Architect should understand
  - ▶ the customer
  - ▶ your own company
  - ▶ the market
- ▶ And see opportunities and limitations

Source: Gerrit Muller, <http://www.gaudisite.nl/SABP.html>

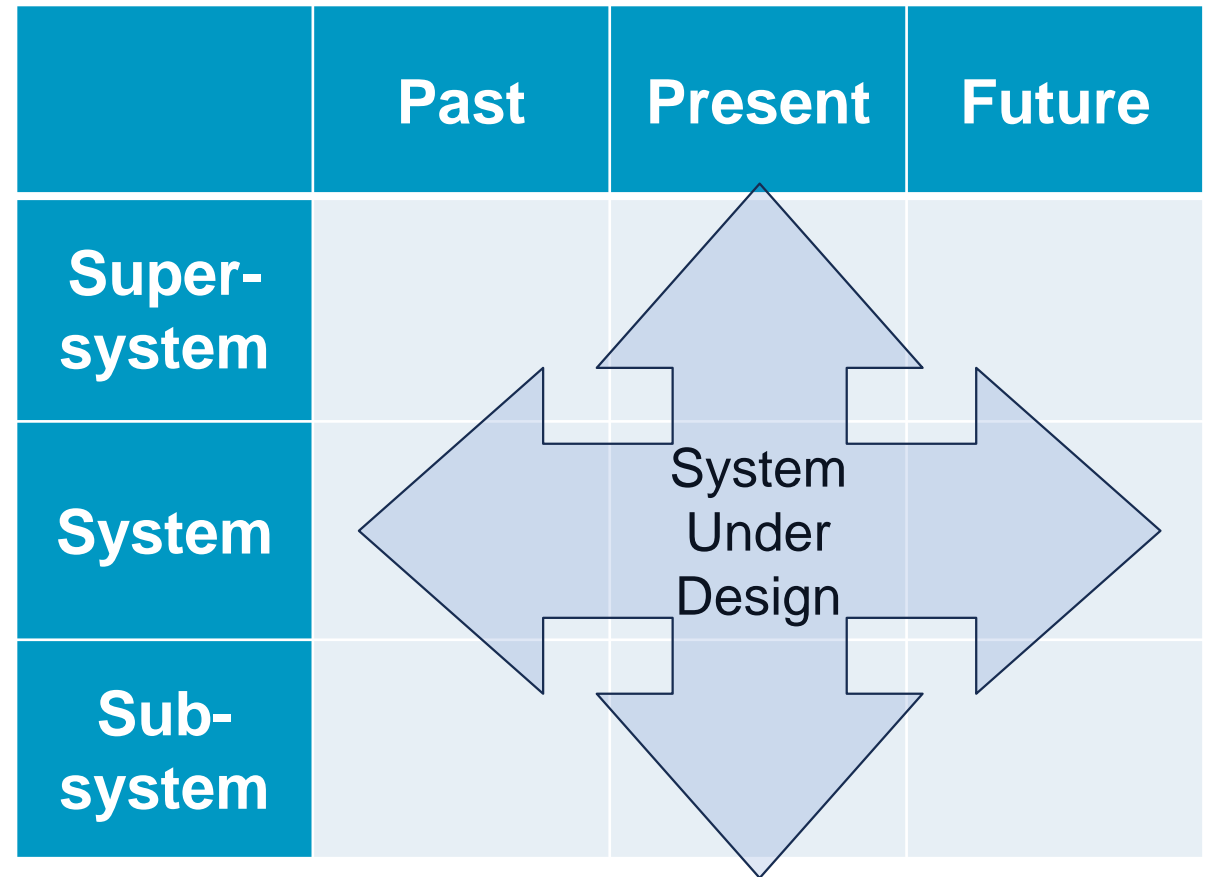

# EXPLORING THE FUTURE: 9-WINDOW DIAGRAM

Put system central, instead of focussing on details

- ▶ Zoom out to see the whole
- ▶ Zoom in on crucial issues only
- ▶ Holistic thinking / Big picture
- ▶ Also time-wise

Pitfall: stay too general or superficial.

# EXPLORING THE FUTURE: 9-WINDOW DIAGRAM

Put system central, instead of focussing on details

- ▶ Zoom out to see the whole
- ▶ Zoom in on crucial issues only
- ▶ Holistic thinking / Big picture
- ▶ Also time-wise

Pitfall: stay too general or superficial.

	Past	Present	Future
Super-system	Medical treatment in hospital	Medical Treatment by medication	Continuous diagnosing and treatment
System	Nurse	Smart Pill Box	Personalized delivery
Sub-system	Recipes, Procedures	Dose boxes, Reminder, Water	Ampuls, Doser, IV

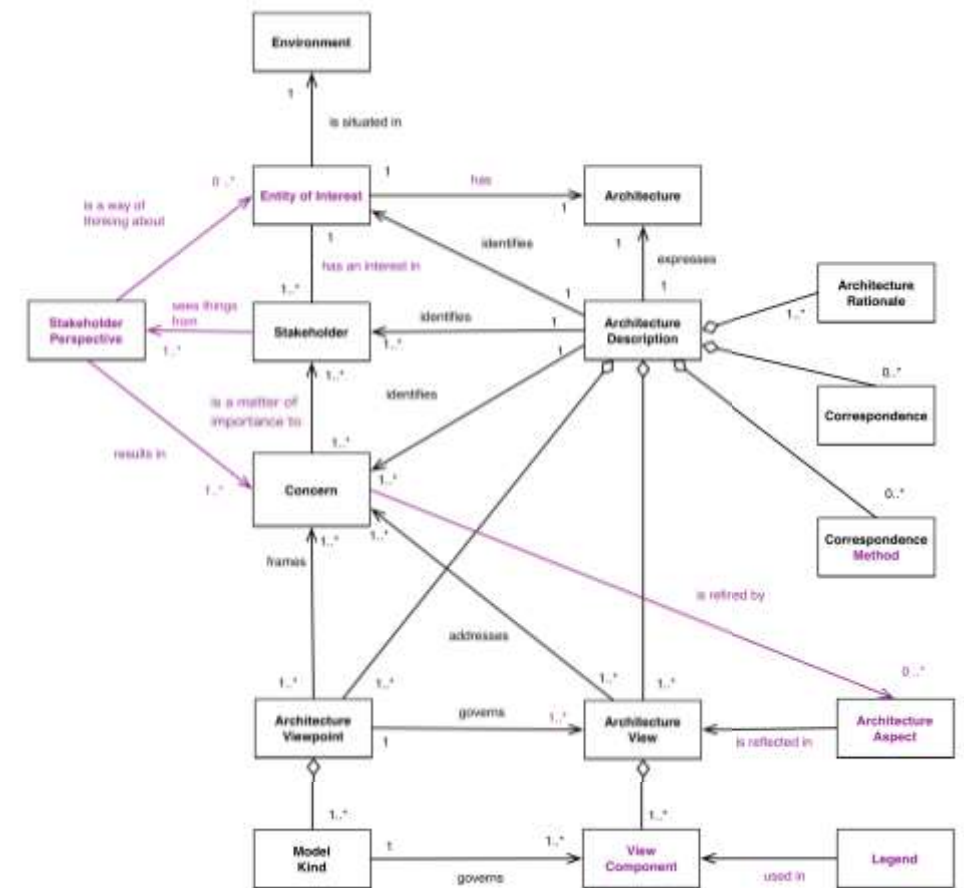

# INTERMEZZO: ARCHITECTURE AND REPRESENTATION

- ▶ Every system of some size *has* an architecture
- ▶ Not all architectures are made *explicit* or *tangible*
- ▶ An architecture *description* contains one or more *views*.
- ▶ Views are created from *viewpoints*

PRINCIPLE It is not possible to capture the functional features and quality properties of a complex system in a single comprehensible model that is understandable by, and of value to, its stakeholders.

Rozanski, N. and E. Woods (2012). *Software Systems Architecture*. Upper Saddle River, Addison Wesley.

ISO/IEC/IEEE 42010

<http://www.iso-architecture.org/42010/cm/>

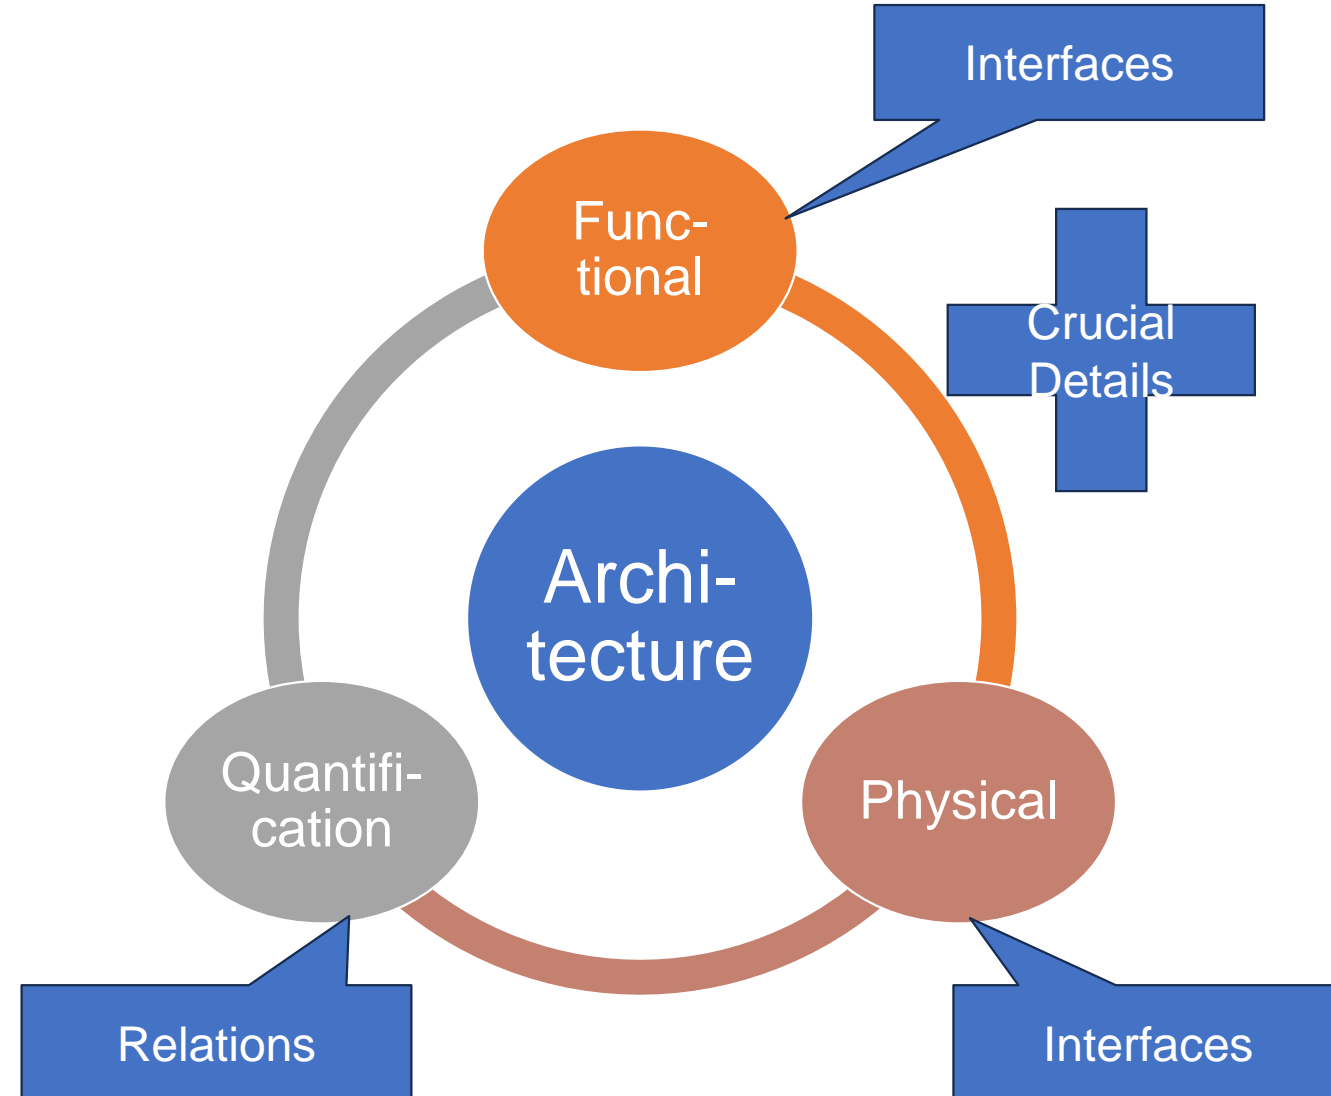

# MULTIPLE VIEWS: WHICH ONES DO WE NEED?

We already saw:

- ▶ Functions & function allocation
- ▶ Interfaces
- ▶ Big picture
- ▶ Crucial Details

Also needed:

- ▶ Physical
- ▶ Quantification

# FUNCTIONAL VIEW

- ▶ What is it that the system does?
- ▶ How is the main functionality broken down into manageable chunks
- ▶ Functional interfaces

- ▶ Energy
- ▶ Matter
- ▶ Information

N<sup>2</sup> diagram

- ▶ Use Verb + Substantive:
  - ▶ (to) Make coffee
  - ▶ (to) Transport persons
  - ▶ (to) Expose wafer
  - ▶ ...
- ▶ Do not mix the function with the solution
  - ▶ Write “Provide mechanical power” instead of “Engine”

# QUANTIFICATION VIEW

- ▶ How much?
  - ▶ Throughput
  - ▶ Accuracy
  - ▶ Power
  - ▶ Customer satisfaction
  - ▶ Business contribution
  - ▶ ...

**Competitive Engineering** by Tom Gilb

A Handbook For Systems Engineering,  
Requirements Engineering, and Software  
Engineering Using Planguage

<https://www.gilb.com/competitive-engineering>

- ▶ At (complex) system level:  
Use **Key Drivers**

A key driver is a generalized requirement representing stakeholders' main interest.

- ▶ As quantifiable as possible;
- ▶ 5 to 10 key drivers per system

# QUANTIFICATION VIEW: Key Drivers

- ▶ Telephone system:
  - ▶ Number of simultaneous connections
- ▶ Commercial planes:
  - ▶ Cost per mile per passenger
  - ▶ Turn-around time (etc.)  
<http://www.wired.com/science/discoveries/news/2006/05/70689>
- ▶ EV:
  - ▶ Range;
  - ▶ Charging speed (km/h);
  - ▶ Total cost of ownership (TCO)

Defining good key drivers takes time, effort and requires insight

**Key drivers** *produce* performance and **key (performance) indicators** *measure* performance.

Well-designed indicators provide feedback about your business, but they don't deliver results – drivers do.

(<http://www.focus3organizationalculture.com/the-performance-driver-model/>)

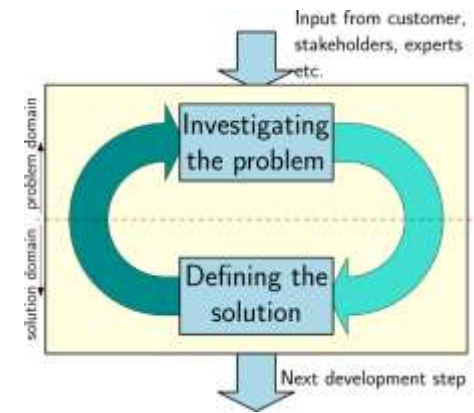

<https://centralohiobwpc.com/performance-driver-model/>

# PHYSICAL VIEW

- ▶ Allocation of functions to subsystems
- ▶ Answer to **HOW?**
- ▶ For the crucial ones: operating principle and potential embodiment

Functions	Solutions				
Reach To-Be-Cleaned Surface	Extendable Tool-Rod	Jointed Tool-Rod	Surface-Mounted Arm	AGV/Robot	Vehicle
Clean Surface	Single Function or Interchangeable Cleaning Heads			Combinations	
	Vacuuming	Dry Cloth	Wet Cloth	Steam	Vacuum + Wet Cloth
				Dry Cloth + Vacuum	Steam + Dry Cloth
Wetting <sup>1</sup>	Manually Wetting Cloth	Wetting Surface (Spray)	Wetting Cloth with Spray (If Inside Vehicle/AGV/Robot)		
Joint Angle <sup>2</sup>	Pressure Application		Gear-Like Angle Lock	Slider Lock	Wires
	Free	Locked			
Maneuverability <sup>3</sup>	Tracks	Caster Wheel	Omni-Wheels		
Movement Pattern <sup>3</sup>	Long-Side Switch	Short-Side Switch	Inward Spiral		
Sensing <sup>4</sup>	Cameras	Infrared Distance Sensors	LIDAR	AGV Guidance	

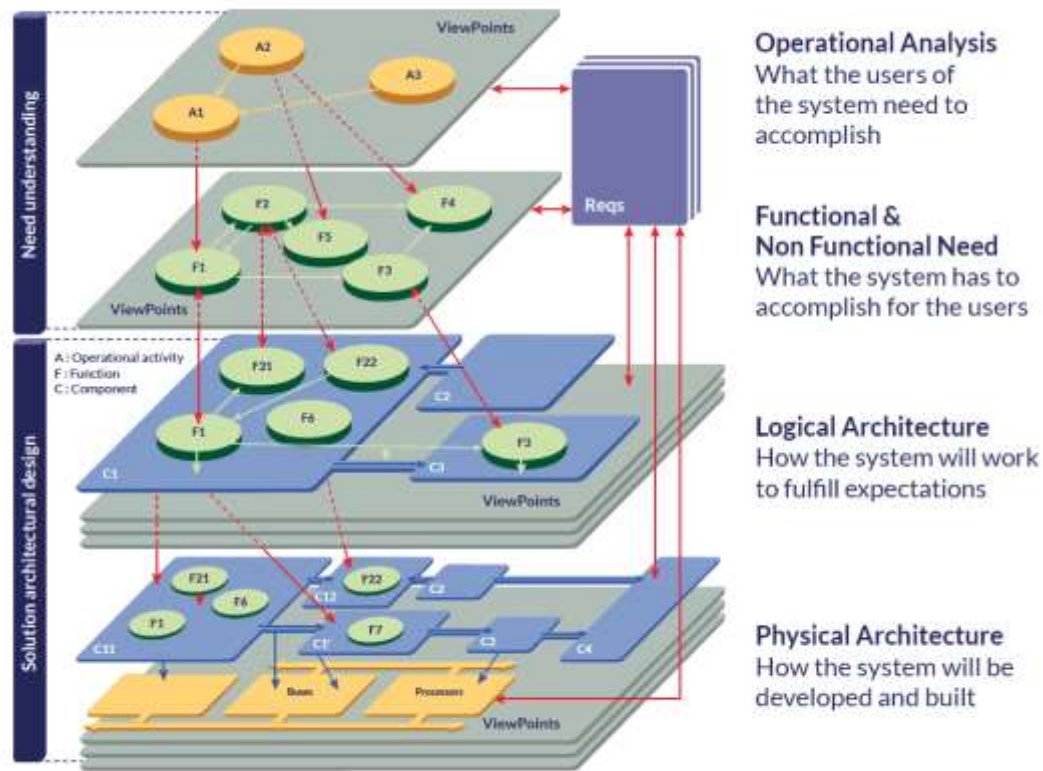

1) If Wet Cloth Cleaning is involved  
 2) If a Jointed Arm is involved  
 3) If an AGV or Vehicle is involved  
 4) If an AGV/Robot is involved

van Zijl, R. (2024). *Adopting CATs: Development of Cleaner Assisting Technologies for a Gradual Technology Adoption and Implementation Process in the Cleaning Sector*. [EngD Thesis, University of Twente]. University of Twente.

# LOGICAL VIEW – ???

- ▶ “Layer” “between” Functional and Physical
- ▶ Logical architecture may make sense in some cases (SW)
- ▶ Good architecture should be sound from all viewpoints: functional, physical, quantification

I often see discussion whether a view or an item is “functional”, “logical” or “physical”; distracting from the real architecting work...

Arcadia Architecture Layers

SYSTEMS ENGINEERING & MULTIDISCIPLINARY DESIGN

# HOW IT ALL FITS TOGETHER: A3 ARCHITECTURE OVERVIEWS

- ▶ 2 Sides of an A3 sheet
- ▶ Model and Text
- ▶ Structured and consistent to improve readability
- ▶ Interlinked visual representations to support understanding and discussion
  - ▶ Functional
  - ▶ Physical
  - ▶ Quantification

- ▶ More information: [A3AO.eu](http://A3AO.eu)  
(the A3 Architecture Overviews resource site)

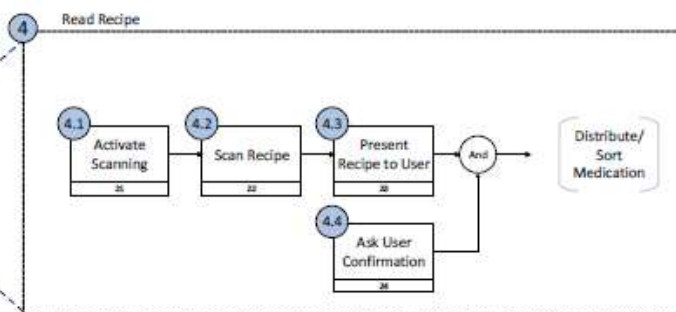

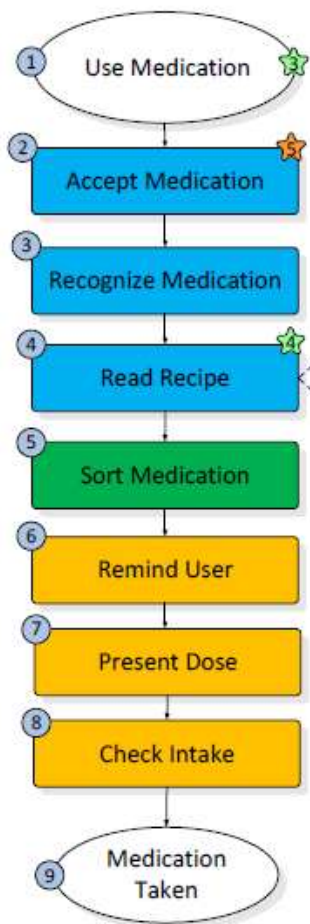

A3 Architectural Overview example

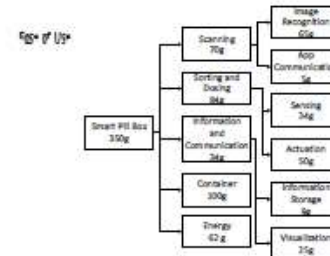

## The A3 Architecture Overview of a Smart Pillbox

## Quantification of Key Parameters

Variant	Options	Price (\$)	Time (Months)	Cost (\$K)	Time (Months)	Cost (\$K)
Improve existing pill intake	None	0.24	14	240	1.1	27.4
	None	0.07	14	240	1.19	24.4
	None	0.24	14	240	1.19	24.4
New Design: 80%	None	0.24	14	240	1.19	24.4
	None	0.07	14	240	1.19	24.4
	None	0.24	14	240	1.19	24.4
Re-Intelligence	None	0.1	14	240	1	24
	None	0.07	14	240	1.19	24.4
	None	0.24	14	240	1.19	24.4

## Physical view

User	Button	Pills	Button Recipe		Button		Button
	Accept Medication	Data: Is pill insertion finished?					
Data: Visual Information		Recognize Medication		Data: Medication			
Data: Visual Information (Confirmation Request)			Read Recipe	Data: Recipe			
Data: Visual Information (Confirmation Request)				Sort Medication	Data: Dosage	Data: Dosage	
Sound/Vibration					Remind User		
Pills						Present Dose	
Data: Visual Information (Confirmation Request)				Data: Remaining Pills	Data: Were the pills taken?		Check Intake

## Design decisions / constraints

- Need Medication Regulation
- Need Safety Regulation
- Reduce Effort and Time of Users
- Make Sure Recipe is Up to Date
- Time to Prepare
- Ease of Use
- Compatibility
- Discoverability
- Capacity

# ARCHITECTURE vs. TECHNICAL CONCEPT

## What and

- ▶ Architecture **divides** the functions and **where** performance requirements, yet leaves the implementation (largely) open
- ▶ (Technical) Concept determines the **implementation** of the functions (operation and embodiment)

Ref. building architecture:

- ▶ The architect designs the overall idea and appearance
- ▶ The structural engineer develops the technical details and solutions

## How

### Wired telephony architecture

- Developed end of the 1800's
- Still relevant today
- Technical implementations have evolved drastically

# HOW TO CREATE AN ARCHITECTURE – 7 STEPS

1. Context diagram and 9-window diagram to understand the system under design.
2. Stakeholder analysis
3. Define Key-drivers (on system level) and requirements (on lower levels)
4. Inventory functions and interfaces (functional  $N^2$ )
5. FunKey (or QFD or similar) to understand the value of the system for the stakeholders, draft Budgets for main key drivers
6. Compare architectures using modular  $N^2$  diagrams, select the preferred one.
7. Put chosen architecture in an A3AO

In reality way less clear-cut

# HEURISTICS FROM: MAIER AND RECHTIN “THE ART OF SYSTEMS ARCHITECTING

- ▶ In architecting a new [aerospace] system, by the time of the first design review, performance, cost and schedule have been predetermined.
- ▶ Group elements that are strongly related to each other, separate elements that are unrelated.
- ▶ Subsystem interfaces should be drawn so that each subsystem can be implemented independently of the specific implementation of the subsystems to which it interfaces.
- ▶ Do not slice through regions where high rates of information exchange are required.

# WRAP-UP

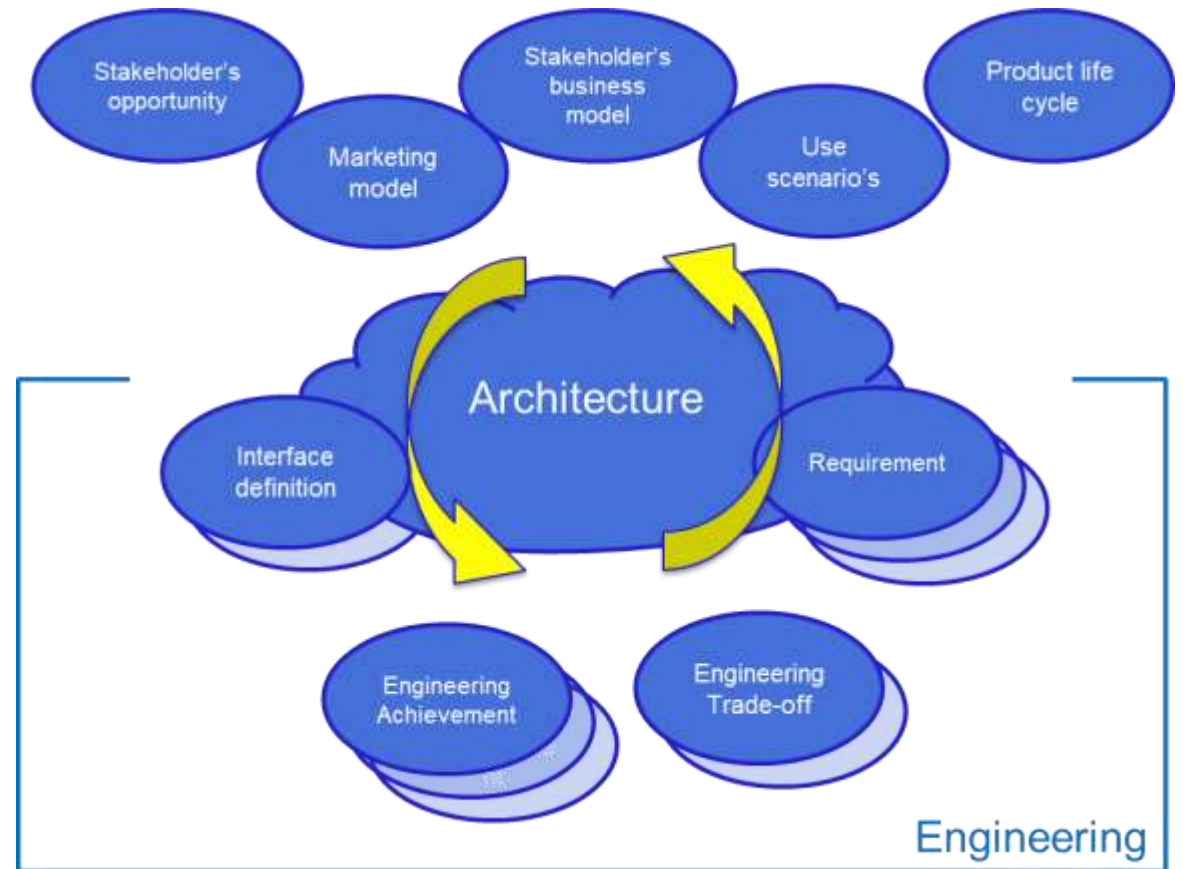

## ▶ An Architecture connects worlds:

- ▶ Customer
- ▶ Business
- ▶ Management
- ▶ Engineering

## ▶ **Balance** is the key-word
