2-6 July 2024

[www.incose.org/symp2024](http://www.incose.org/symp2024) #INCOSEIS

# Overview

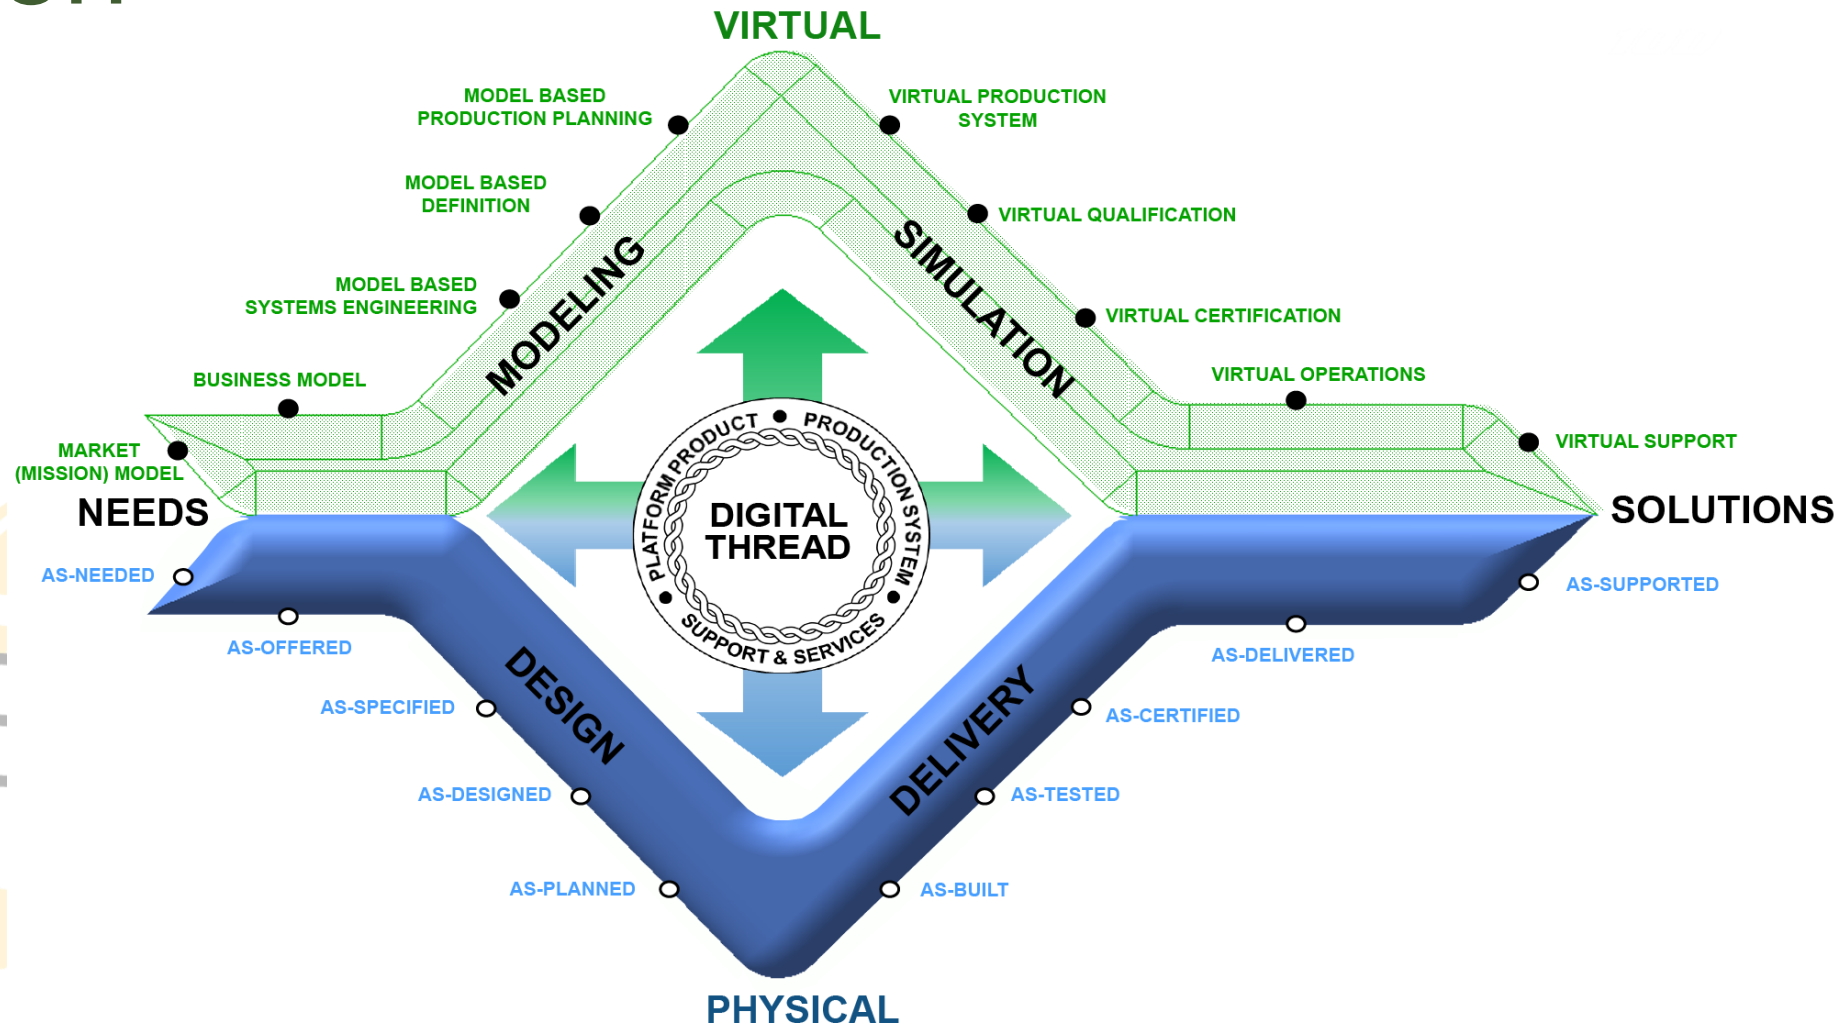

- Boeing is reimagining how we design, build, test, and support its products/services across the full lifecycle
- Central to this reimagination is a comprehensive and unified digital ecosystem, of which MBSE is a crucial foundational element

Not subject to U.S. Export Administration Regulations (EAR), (15 C.F.R. Parts 730-774) or U.S. International Traffic in Arms Regulations (ITAR), (22 C.F.R. Parts 120-130).

# Vision

## Evolution of System Engineering (SE) to Model Based Engineering (MBE)

Source: <https://www.boeingsuppliers.com/modelbasedengineering.html>

Not subject to U.S. Export Administration Regulations (EAR), (15 C.F.R. Parts 730-774) or U.S. International Traffic in Arms Regulations (ITAR), (22 C.F.R. Parts 120-130).

2-6 July 2024

[www.incose.org/symp2024](http://www.incose.org/symp2024) #INCLOSEIS

# Series Objective

- Discuss what can be learned from applying MBSE for Product Assurance (PA) or RAMPSSS
  - Reliability/Availability/Maintainability (RAM)
  - Product Support (PS)
  - System Safety (SS)
- Contexts
  - Products and Services
  - Hardware and Software
  - Military and Civilian
  - Full Lifecycle (Concept Development to Disposal)

Not subject to U.S. Export Administration Regulations (EAR), (15 C.F.R. Parts 730-774) or U.S. International Traffic in Arms Regulations (ITAR), (22 C.F.R. Parts 120-130).

Copyright © 2024 Boeing. All rights reserved.

# Presentation Objective

- Kick off the series on MBSE for PA with a focus on:
  - System Safety
  - Civil/Military Rotorcraft Platforms (CRP/MRP)
  - Early Lifecycle
    - Starting with Conceptual Development
    - Ending with Detailed Design
- Observations
  - Systems Engineering Fundamentals
  - Centralization
  - External Tool Linkages

Not subject to U.S. Export Administration Regulations (EAR), (15 C.F.R. Parts 730-774) or U.S. International Traffic in Arms Regulations (ITAR), (22 C.F.R. Parts 120-130).

Copyright © 2024 Boeing. All rights reserved.

Systems Engineering Fundamentals

# Observations

Not subject to U.S. Export Administration Regulations (EAR), (15 C.F.R. Parts 730-774) or U.S. International Traffic in Arms Regulations (ITAR), (22 C.F.R. Parts 120-130).  
Copyright © 2024 Boeing. All rights reserved.

2-6 July 2024

[www.incose.org/symp2024](http://www.incose.org/symp2024) #INCOSEIS

# SE Fundamentals

- SE fundamentals are still vital for MBSE
- MBSE tools do not absolve a program from the responsibility of executing solid SE fundamentals
- CRP is presented as an example

Not subject to U.S. Export Administration Regulations (EAR), (15 C.F.R. Parts 730-774) or U.S. International Traffic in Arms Regulations (ITAR), (22 C.F.R. Parts 120-130).

Copyright © 2024 Boeing. All rights reserved.

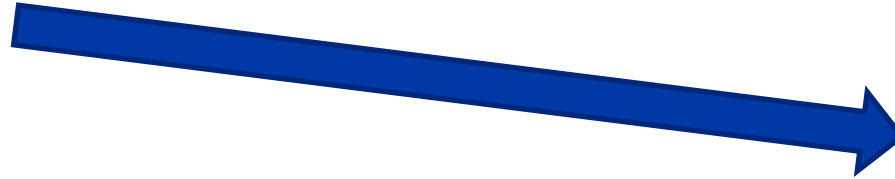

# CRP Initial Plan

## Planned Program Baseline

## Internal Baseline/Milestone

## External Baseline/Milestone

- Operational Model Baseline (OMB) (Requirements)

- Functional Baseline (FBL) (Functions)

- Allocated Baseline (ABL) (Physical & Logical)

- Critical Design Review (CDR)

Not subject to U.S. Export Administration Regulations (EAR), (15 C.F.R. Parts 730-774) or U.S. International Traffic in Arms Regulations (ITAR), (22 C.F.R. Parts 120-130).

Copyright © 2024 Boeing. All rights reserved.

# CRP Early Challenges

- New, large, and complex system
- Program was in jeopardy due to SE fundamentals
  - Minimal planned baselines/milestones
  - No tree/tier structure
  - Limited synchronization between
    - Requirements
    - Functions
    - Elements (Physical and Logical)

Not subject to U.S. Export Administration Regulations (EAR), (15 C.F.R. Parts 730-774) or U.S. International Traffic in Arms Regulations (ITAR), (22 C.F.R. Parts 120-130).

Copyright © 2024 Boeing. All rights reserved.

# CRP Early Challenges (cont.)

- Requirements
  - Converting excerpts from standards directly into requirements
  - Single tier
- Functions
  - Mixing functions and subfunctions
  - Mixing hardware, software, and hybrid functions
- Physical/Logical Elements
  - Attempted to define architectures without predecessors
  - Attempting make/buy decisions

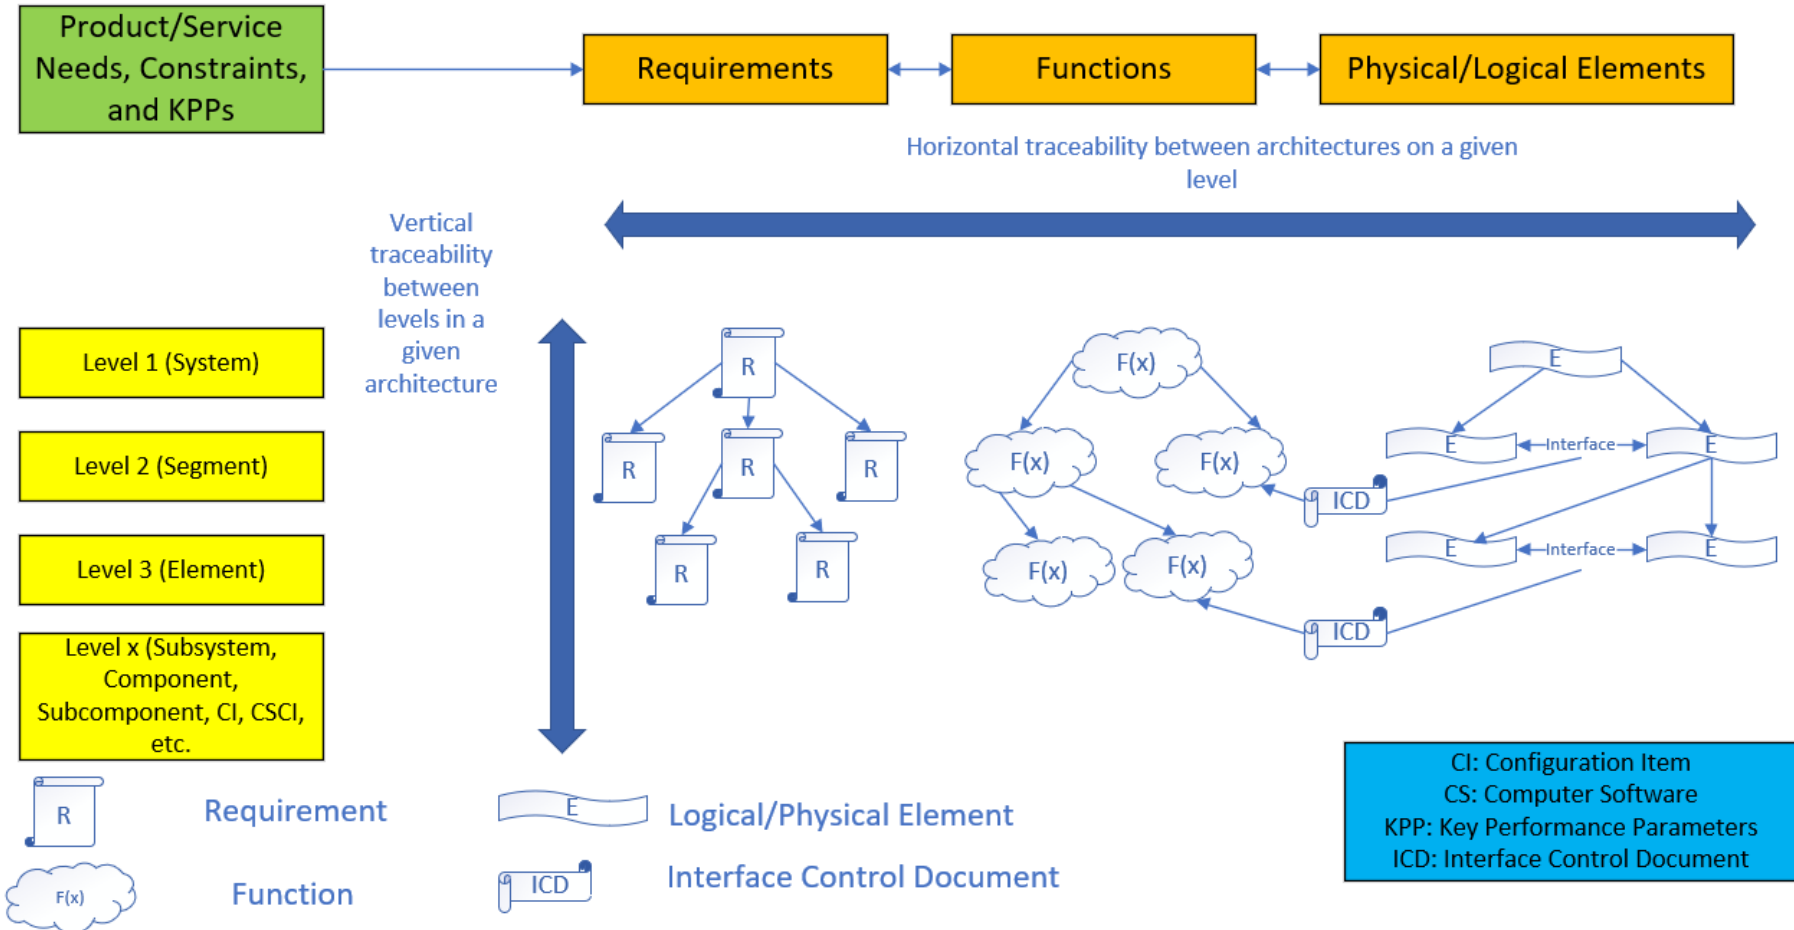

Not subject to U.S. Export Administration Regulations (EAR), (15 C.F.R. Parts 730-774) or U.S. International Traffic in Arms Regulations (ITAR), (22 C.F.R. Parts 120-130).

Copyright © 2024 Boeing. All rights reserved.

# SE Trees & Traceability

## Linkages

- Vertical
- Horizontal
- Requirements & Architecture
- Functional, Logical, & Physical Architecture
- Hardware & Software
- Customers, Integrators & Suppliers

Not subject to U.S. Export Administration Regulations (EAR), (15 C.F.R. Parts 730-774) or U.S. International Traffic in Arms Regulations (ITAR), (22 C.F.R. Parts 120-130).

Copyright © 2024 Boeing. All rights reserved.

# Program Overview & Baselines

## Planned Program Baseline

- Operational Model Baseline (OMB) (Requirements)
- Functional Baseline (FBL) (Functions)
- Allocated Baseline (ABL) (Physical & Logical)
- Product Baseline (PBL) (Physical & Logical)

## Internal Baseline/Milestone

- Initial Design Requirements Review (IDRR)
- Initial Design Functional Review (IDFR)
- Initial Design Concept Review (IDCR)

## External Baseline/Milestone

- System Requirements Review (SRR)
- System Functional Review (SFR)
- Preliminary Design Review (PDR)
- Critical Design Review (CDR)

Not subject to U.S. Export Administration Regulations (EAR), (15 C.F.R. Parts 730-774) or U.S. International Traffic in Arms Regulations (ITAR), (22 C.F.R. Parts 120-130).

Copyright © 2024 Boeing. All rights reserved.

# CRP Success

- Program restructured and slowed down
- Program is now proceeding on the right path
  - Baselines and milestones added
  - Tiered trees implemented and synchronized between:
    - Requirements
    - Functions
    - Physical Elements
    - Logical Elements

Not subject to U.S. Export Administration Regulations (EAR), (15 C.F.R. Parts 730-774) or U.S. International Traffic in Arms Regulations (ITAR), (22 C.F.R. Parts 120-130).

Copyright © 2024 Boeing. All rights reserved.

Centralization

# Observations

Not subject to U.S. Export Administration Regulations (EAR), (15 C.F.R. Parts 730-774) or U.S. International Traffic in Arms Regulations (ITAR), (22 C.F.R. Parts 120-130).

Copyright © 2024 Boeing. All rights reserved.

2-6 July 2024

[www.incose.org/symp2024](http://www.incose.org/symp2024) #INCOSEIS

16

# Centralization

- MBSE tools enable extremely powerful linkages to be established in a single central repository
- SS on MRP is presented as an example

Not subject to U.S. Export Administration Regulations (EAR), (15 C.F.R. Parts 730-774) or U.S. International Traffic in Arms Regulations (ITAR), (22 C.F.R. Parts 120-130).

Copyright © 2024 Boeing. All rights reserved.

2-6 July 2024

[www.incose.org/symp2024](http://www.incose.org/symp2024) #INCOSEIS

17

# Processes, Standards, & Tools

- Applicable Standards
  - Common: SAE ARP 4754A & 4761, S1000D Standard Numbering System (SNS)
  - MRP only: MIL-STD-882E, NAS 411 & 411-1 (Hazardous Materials)
  - CRP only: FAA and EASA
- Tools
  - DESE-CAMEO (MBSE)
  - DOORS (Requirements)
  - 3DX or Teamcenter (Design Engineering/Integration)
  - ADO or JIRA (Systems and Software Engineering Management)
  - Fault Tree Analysis
    - Windchill Risk & Reliability (WRR)
    - Reliability Workbench (RWB)
    - CAFTA

Not subject to U.S. Export Administration Regulations (EAR), (15 C.F.R. Parts 730-774) or U.S. International Traffic in Arms Regulations (ITAR), (22 C.F.R. Parts 120-130).

Copyright © 2024 Boeing. All rights reserved.

# MRP Overview & Baselines

## Planned Program Baseline

- Operational Model Baseline (OMB) (Requirements)
- Functional Baseline (FBL) (Functions)
- Allocated Baseline (ABL) (Physical & Logical)
- Product Baseline (PBL) (Physical & Logical)

## Internal Baseline/Milestone

- ➡ ■ Initial Design Requirements Review (IDRR)
- ➡ ■ Initial Design Functional Review (IDFR)
- ➡ ■ Initial Design Concept Review (IDCR)

## External Baseline/Milestone

- ➡ ■ System Requirements Review (SRR)
- ➡ ■ System Functional Review (SFR)
- ➡ ■ Preliminary Design Review (PDR)
- ➡ ■ Critical Design Review (CDR)

Not subject to U.S. Export Administration Regulations (EAR), (15 C.F.R. Parts 730-774) or U.S. International Traffic in Arms Regulations (ITAR), (22 C.F.R. Parts 120-130).

Copyright © 2024 Boeing. All rights reserved.

# Safety Artifacts

- Functional Baseline System Model (FBSM) in CAMEO for FBL/IDFR/SFR
  - Aircraft Functional Hazard Assessment (AFHA)
  - System-Theoretic Process Analysis (STPA)
  - System Requirements Hazard Analysis (SRHA)
- Allocated Baseline System Model (ABSM) in CAMEO for ABL/IDCR/PDR
  - System Functional Hazard Assessment (SFHA)
  - Preliminary System Safety Assessment (PSSA)
  - System/Subsystem Hazard Analysis (SHA/SSHA)
  - Preliminary Software Safety Critical Functional Analysis (PSSCFA)
- Reports
  - System Safety Program Plan (SSPP)
  - Hazardous Material Management Program Plan/Report (HMMP/HMMPR)
  - Critical Safety Item (CSI) Plan & Preliminary Candidate List
  - Operating & Support Hazard Analysis (O&SHA)
  - Aircraft & System Fault Tree Analysis (AFTA/SFTA)

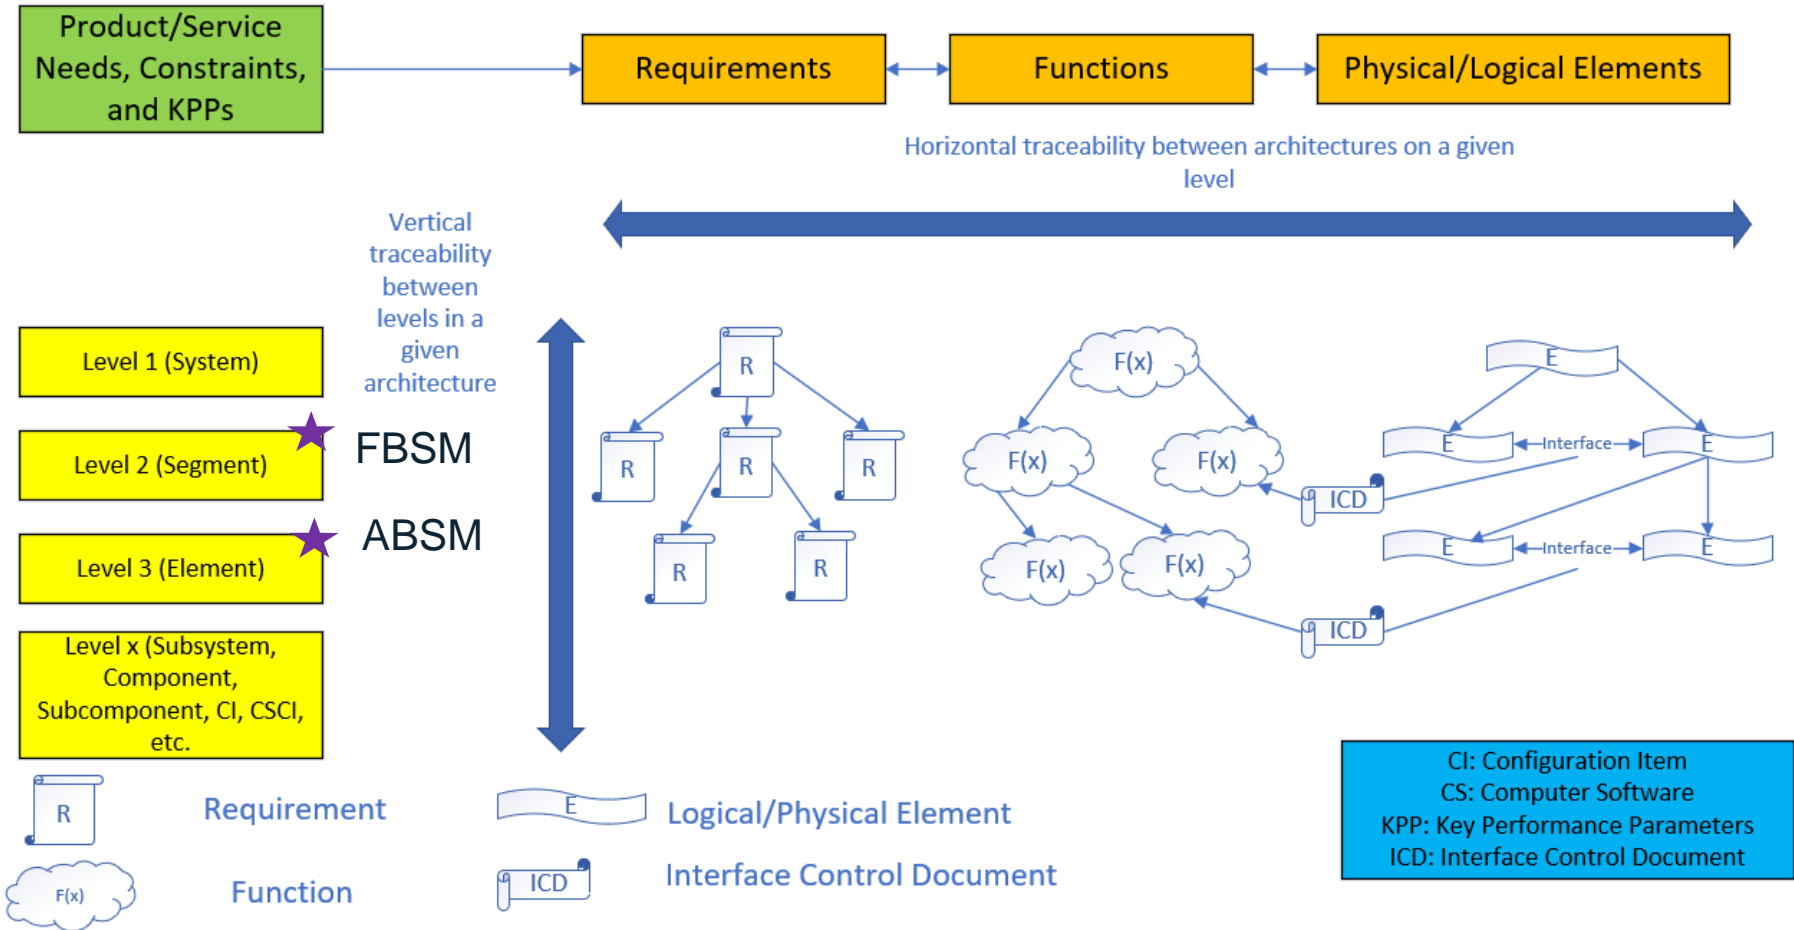

Not subject to U.S. Export Administration Regulations (EAR), (15 C.F.R. Parts 730-774) or U.S. International Traffic in Arms Regulations (ITAR), (22 C.F.R. Parts 120-130).

Copyright © 2024 Boeing. All rights reserved.

# SE Trees & Traceability

## Linkages

- Vertical
- Horizontal
- Requirements & Architecture
- Functional, Logical, & Physical Architecture
- Hardware & Software
- Customers, Integrators & Suppliers

Not subject to U.S. Export Administration Regulations (EAR), (15 C.F.R. Parts 730-774) or U.S. International Traffic in Arms Regulations (ITAR), (22 C.F.R. Parts 120-130).

Copyright © 2024 Boeing. All rights reserved.

# MBSE/SS Linkages (Hazards)

- Requirements, functions, architectures, & hazards are all in CAMEO
- AFHAs & SFHAs in CAMEO allow direct linkages to requirements, functions, & other safety artifacts
  - Requirements
    - Hazard linkage to requirements goes beyond safety-tagging
    - Provides context about why a specific requirement is safety-tagged & what hazard(s) it is tagged to
    - Shows all of the requirements tagged to a specific hazard
  - Functions
    - Hazard linkage to functions facilitates assignment of initial Functional Development Assurance Levels (FDALs)
    - FDALs captured in PSSCFA based on severities of hazards linked to functions
  - FHAs linked directly to SHAs/SSHAs for assignment of Risk Assessment Codes (RACs) to each individual hazard
- **Powerful linkages in CAMEO make it vital to establish requirements specification trees & a master function library as quickly as possible to feed into FHAs, establish initial FDALs in the PSSCFA, determine preliminary RACs in the SHAs/SSHAs, & minimize rework**

Not subject to U.S. Export Administration Regulations (EAR), (15 C.F.R. Parts 730-774) or U.S. International Traffic in Arms Regulations (ITAR), (22 C.F.R. Parts 120-130).

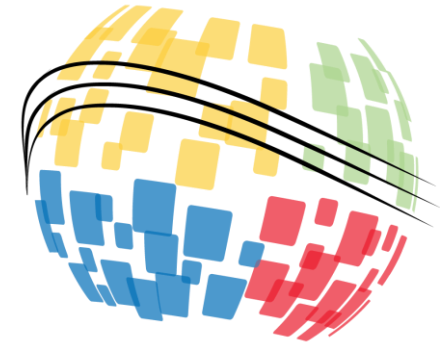

Copyright © 2024 Boeing. All rights reserved.

# MBSE/SS Linkages (STPA)

- STPA pathfinder was completed
  - Identified in the customer's statement of work
  - Performed in CAMEO with support from Design, Enterprise Safety, Cybersecurity, & select suppliers
  - Delivered in the FBSM
- Findings
  - 44 tier 3 requirements
  - 153 lower-level candidate requirements identified
  - Effort undertaken while the program in general was focusing on tier 1 & tier 2 requirements
  - Requirements could be linked to STPA's Undesirable Control Actions (UCAs) similar to hazards from FHAs
- **STPA effectively supplemented traditional safety approaches by facilitating discovery of lower-level safety requirements earlier than they otherwise may have been identified**

Not subject to U.S. Export Administration Regulations (EAR), (15 C.F.R. Parts 730-774) or U.S. International Traffic in Arms Regulations (ITAR), (22 C.F.R. Parts 120-130).

Copyright © 2024 Boeing. All rights reserved.

External Tool Linkages

# Observations

Not subject to U.S. Export Administration Regulations (EAR), (15 C.F.R. Parts 730-774) or U.S. International Traffic in Arms Regulations (ITAR), (22 C.F.R. Parts 120-130).

Copyright © 2024 Boeing. All rights reserved.

2-6 July 2024

[www.incose.org/symp2024](http://www.incose.org/symp2024) #INCOSEIS

24

# External Tool Linkages

- Not everything can be easily captured, analyzed, and delivered via a MBSE model at this time
- Other tools are needed once SS looks beyond itself to additional disciplines
- SS on MRP is presented as an example

Not subject to U.S. Export Administration Regulations (EAR), (15 C.F.R. Parts 730-774) or U.S. International Traffic in Arms Regulations (ITAR), (22 C.F.R. Parts 120-130).

Copyright © 2024 Boeing. All rights reserved.

# Fault Trees (System Safety)

- Aircraft & system-level fault trees were done in Windchill Risk & Reliability (WRR)
  - AFTAs for aircraft-level functions/hazards (examples: Aviate, Navigate)
  - SFTAs for system-level functions/hazards (example: to provide engine motive force)
  - FTAs for lower-level functions/hazards were not developed unless needed to inform design trade studies
- WRR enabled robust fault tree integration by collecting FTAs into a single model
  - Consolidation into a single model vs a single file for each individual FTA
  - Vertical integration (SFTAs feeding into AFTAs, like loss of single engine feeding into loss of lift)
  - Horizontal integration (SFTAs feeding into each other, like hydraulics feeding into dependent mechanical systems)
  - Updates could propagate through all fault trees simultaneously
  - Proof-of-concept for importing supplier FTAs from other tools into WRR was successfully demonstrated, but not expanded upon (example: engine FTAs from supplier)
- **WRR successfully collected & linked FTAs within a single model to enable vertical & horizontal integration, along with faster update propagation**

Not subject to U.S. Export Administration Regulations (EAR), (15 C.F.R. Parts 730-774) or U.S. International Traffic in Arms Regulations (ITAR), (22 C.F.R. Parts 120-130).

Copyright © 2024 Boeing. All rights reserved.

# Fault Trees (MBSE)

- WRR also enabled robust integration between System Safety, Reliability, & Product Support
  - System Safety, Reliability, & Product Support harmonized artifacts early via common numbering (S1000D SNS)
  - SFTAs functions/hazards were managed with S1000D, linking physical & functional architectures
  - Reliability also planned to use WRR to house & update their Failure Modes Effects & Criticality Analyses (FMECAs)
    - FMECAs failure modes could eventually have been used directly in FTAs (typically SFTAs, but possibly AFTAs)
    - FMECAs feed into Maintainability, Testability, & Publications artifacts, all of which were managed via S1000D
    - FMECAs also feed into Critical Safety Item (CSI) Candidate List
- WRR limited in its abilities to directly integrate with CAMEO
  - Automated feed from WRR into CAMEO was not feasible; FTA results had to be manually entered into SHA/SSHA
  - Proof-of-concept for importing FTAs directly into CAMEO was successfully demonstrated, but was not pursued
- **WRR & S1000D successfully laid the foundation for robust integration between System Safety, Reliability, & Product Support, but WRR was limited in its abilities to integrate with CAMEO**

Not subject to U.S. Export Administration Regulations (EAR), (15 C.F.R. Parts 730-774) or U.S. International Traffic in Arms Regulations (ITAR), (22 C.F.R. Parts 120-130).

Copyright © 2024 Boeing. All rights reserved.

# Fault Trees (Civil-Military Integration)

## Non-Military Unique

- Catastrophic:
  - $<1E-09$  per FH (extremely improbable)
  - No single-point failures
- Hazardous:  $<1E-07$  per FH (extremely remote)
- Major:  $<1E-05$  per FH (remote)
- Minor: no requirement
- Consistent with civil standards & ARP 4761

## Risk Matrix

Severity Probability Per FH	Catastrophic 1	Critical 2	Marginal 3	Negligible 4
Frequent >1E-03 A				
Probable >1E-04 but <1E-03 B				
Occasional >1E-05 but <1E-04 C				
Remote >1E-06 but <1E-05 D				
Improbable >1E-07 but <1E-06 E				
Very Improbable <=1E-07 but >Baseline F				
Risk Level Key				
HIGH RISK    SERIOUS RISK    MEDIUM RISK    LOW RISK				

## Military Unique

- Catastrophic:
  - $<1E-07$  per FH (very improbable)
  - No single-point failures
- Critical:  $<1E-06$  per FH (improbable)
- Marginal:  $<1E-05$  per FH (remote)
- Negligible: no requirement
- Consistent with military standards derived from MIL-STD-882E's risk matrix, risk levels, severity criteria, & qualitative probability criteria

Not subject to U.S. Export Administration Regulations (EAR), (15 C.F.R. Parts 730-774) or U.S. International Traffic in Arms Regulations (ITAR), (22 C.F.R. Parts 120-130).

Copyright © 2024 Boeing. All rights reserved.

# Future Considerations

Not subject to U.S. Export Administration Regulations (EAR), (15 C.F.R. Parts 730-774) or U.S. International Traffic in Arms Regulations (ITAR), (22 C.F.R. Parts 120-130).

Copyright © 2024 Boeing. All rights reserved.

# Future Considerations

- CAMEO experienced major performance issues using the 2019 version due to the volume of data; upgrade to the 2021 version resolved them sufficiently to complete Preliminary Design phase
- Integration of System Safety content into MBE
  - O&SHA hazards into CAMEO (similar to FHA hazards), with linkages to Design & Publications ecosystems, requirements, & artifacts
  - HMMPR content into 3DX and/or Publications ecosystem, requirements, & artifacts
  - CSIs into CAMEO, DOORS, 3DX, and/or Publications ecosystems, requirements, & artifacts
  - Potential viability for CAMEO as part of a hazard tracking database system, safety escalation processes, and/or Safety Management System (SMS), possibly in conjunction with other tools

Not subject to U.S. Export Administration Regulations (EAR), (15 C.F.R. Parts 730-774) or U.S. International Traffic in Arms Regulations (ITAR), (22 C.F.R. Parts 120-130).

Copyright © 2024 Boeing. All rights reserved.

# Future Considerations (cont.)

- Fault trees
  - Windchill Risk & Reliability also experienced major performance issues due to volume of data; Preliminary Design phase was still completed, but tool improvements were insufficient to overcome these issues & issues likely would have worsened as volume of data grew
  - Integration of FMECA failure modes into SFTAs was not feasible during Preliminary Design, but may be feasible during Detailed Design or later
  - If failure modes & hazards can be linked to in-service data once a platform is fielded, then it may be possible to create a loss model with quantified safety metrics that could be monitored as key safety performance indicators
- STPA potential future applications
  - Engine Controls
  - Modular Open Systems Approach (MOSA) or similar concept
  - Embedded Training
  - Manned-Unmanned Teaming
  - Cybersecurity

Not subject to U.S. Export Administration Regulations (EAR), (15 C.F.R. Parts 730-774) or U.S. International Traffic in Arms Regulations (ITAR), (22 C.F.R. Parts 120-130).

Copyright © 2024 Boeing. All rights reserved.

# Future Considerations (cont.)

- Modularity & customization in MBSE capability suites is essential
  - Selecting applicable MIL-STD-882 tasks for military programs
  - Selecting applicable enterprise, civilian, & military frameworks for MBSE, safety, & certification
    - Hybrid software safety processes (example: MIL-STD-882 & SAE ARP 4754/4761)
    - Hybrid/multiple risk matrices
      - Military platform aspiring to civil thresholds for its non-military unique hardware
      - Platform with individual matrices for individual customers
      - Differences between enterprise safety escalation & platform matrices
      - Derivative Aircraft
        - » Base aircraft certified by FAA
        - » Modifications certified by FAA and/or military (depending on program)
      - Multiple simultaneous civil frameworks (i.e. pursuit of parallel FAA & EASA certification)
- Consider possibilities for integration with proprietary tools

Not subject to U.S. Export Administration Regulations (EAR), (15 C.F.R. Parts 730-774) or U.S. International Traffic in Arms Regulations (ITAR), (22 C.F.R. Parts 120-130).

Copyright © 2024 Boeing. All rights reserved.

# Future Considerations (cont.)

- Embedding system engineers within the Integrated Product Teams (IPTs) (including System Safety) was a very valuable practice & proved to be a highly effective structure
  - Made tools/processes easier for IPTs
  - Ensured MBSE structure, standardization, & discipline throughout the program
  - Gave IPTs a voice in System Engineering forums
- System Safety teambuilding
  - All experience levels needed & welcomed
  - All traditional system safety skillsets are still needed
  - MBSE skillset is also necessary for the team to succeed
    - Multiple system safety engineers also had MBSE expertise in addition to our embedded system engineer
    - Had organic expertise been absent, there may have been need for multiple embedded system engineers
  - Hybrid skillsets were very helpful (system safety practitioners with prior experience in piloting, handling qualities, design, reliability/availability/maintainability, project management, system engineering, product support, etc.)

Not subject to U.S. Export Administration Regulations (EAR), (15 C.F.R. Parts 730-774) or U.S. International Traffic in Arms Regulations (ITAR), (22 C.F.R. Parts 120-130).

Copyright © 2024 Boeing. All rights reserved.

# Future Considerations (cont.)

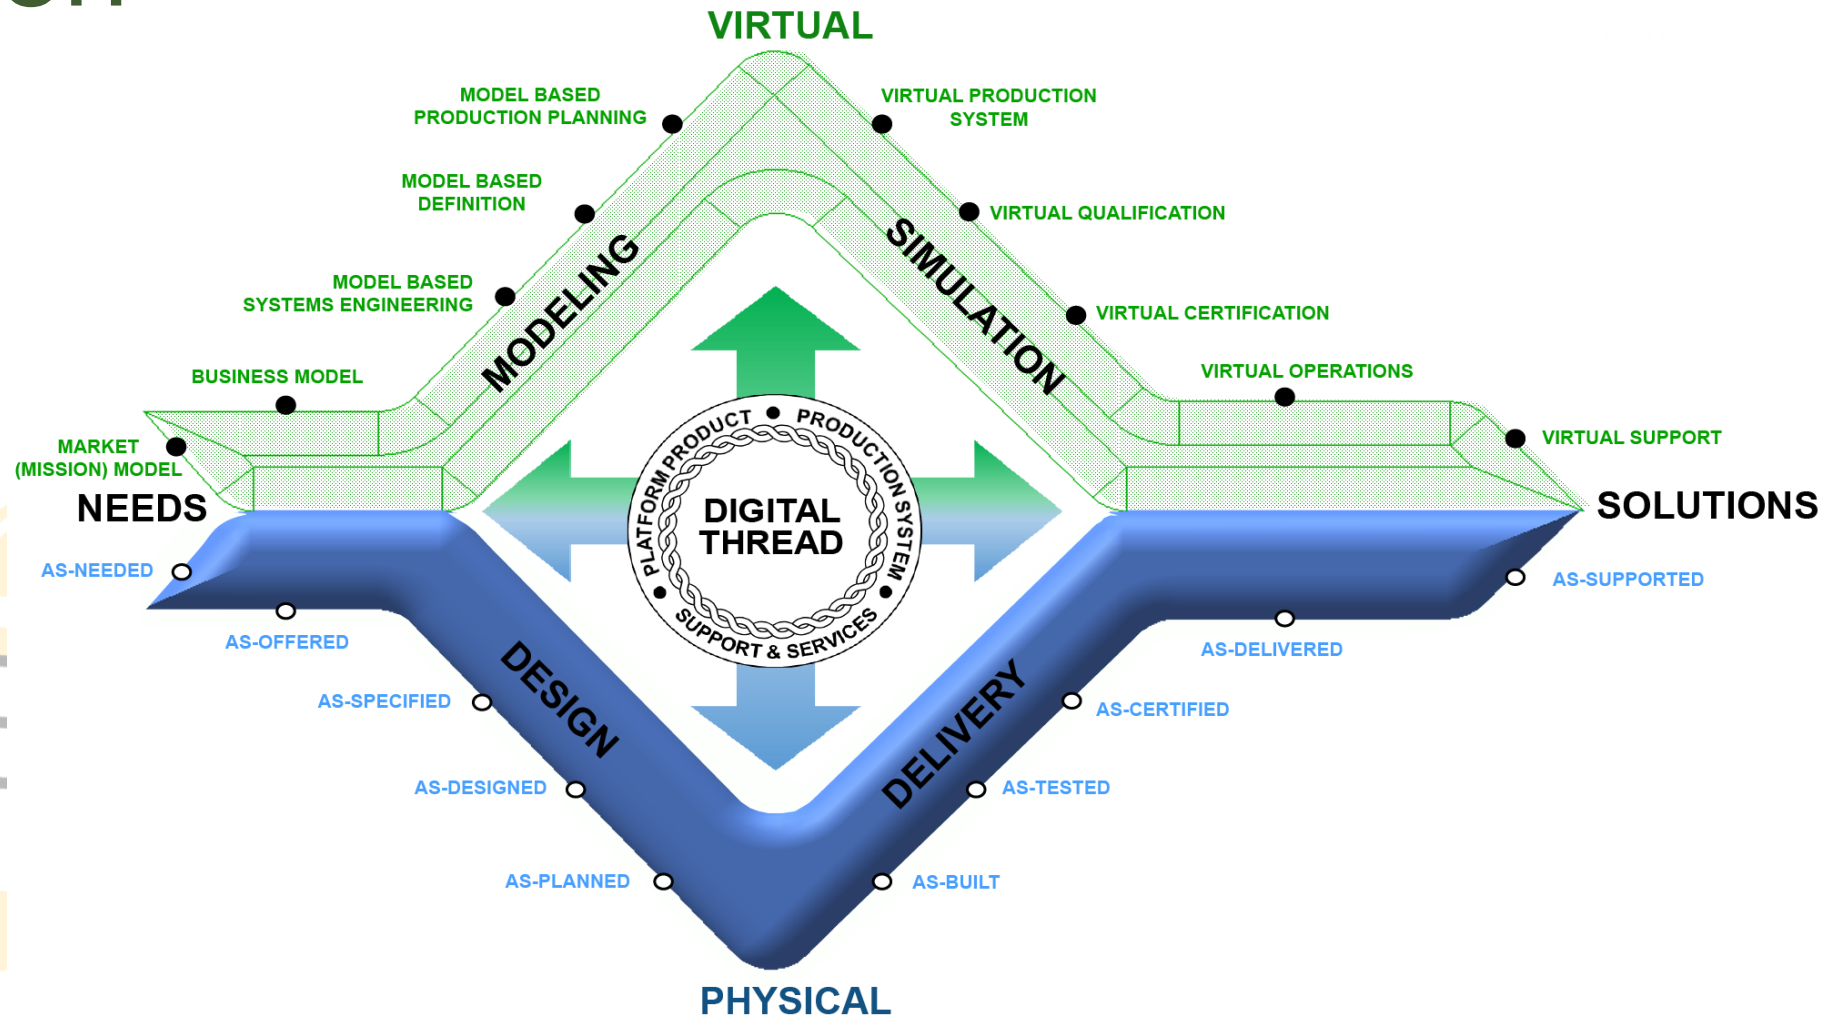

- At Boeing, we are iteratively crystalizing our MBSE/PA experiences for inclusion into our digital ecosystem via Solution Kits
- Solution Kits:
  - Updating and linking existing knowledge
    - Processes (what to do)
    - Training (how to do it)
    - Design Practices (reasons why, experience, ‘tribal knowledge’)
  - Creating adaptive MBSE starter kits to use
    - General enough to be applicable to many situations
    - Specific enough to be actionable and ensure enterprise-wide standardization or commonality to the extent practicable
  - Constantly iterating based on feedback

Not subject to U.S. Export Administration Regulations (EAR), (15 C.F.R. Parts 730-774) or U.S. International Traffic in Arms Regulations (ITAR), (22 C.F.R. Parts 120-130).

Copyright © 2024 Boeing. All rights reserved.

# Vision

## Evolution of System Engineering (SE) to Model Based Engineering (MBE)

Source: <https://www.boeingsuppliers.com/modelbasedengineering.html>

Not subject to U.S. Export Administration Regulations (EAR), (15 C.F.R. Parts 730-774) or U.S. International Traffic in Arms Regulations (ITAR), (22 C.F.R. Parts 120-130).

# Presentation Summary

- Kicked off the MBSE for PA Series with a presentation focused on
  - System Safety on CRP and MRP
  - Early Lifecycle (Starting with Conceptual Development and ending with Detailed Design)
- Demonstrated how MBSE & related tools enabled powerful linkages between requirements, functions, architecture, hazards, artifacts, & teams
- Showed MBSE was used for System Safety analyses to great effect, increasing efficiency, fidelity, & interconnectivity (within & between artifacts)
- Discussed what worked well & what lessons were learned while executing programs
- Highlighted future considerations for analytical integration & expansion
- Emphasized key lessons:
  - SE fundamentals are vital for MBSE; MBSE tools do not absolve a program from needing solid SE fundamentals
  - MBSE tools enable extremely powerful linkages to be established in a single central repository
  - Not everything can be easily captured, analyzed, and delivered via a MBSE model at this time
- Connected MBSE and PA to Boeing's ongoing digital transformation via MBSE/PA solution kits

Not subject to U.S. Export Administration Regulations (EAR), (15 C.F.R. Parts 730-774) or U.S. International Traffic in Arms Regulations (ITAR), (22 C.F.R. Parts 120-130).

# Acronyms

- ABL: Allocated Baseline
- ABSM: Allocated Baseline System Model
- AFHA: Aircraft Functional Hazard Assessment
- AFTA/SFTA: Aircraft & System Fault Tree Analysis
- CDR: Critical Design Review
- CRP: Civilian Rotorcraft Platform
- CSI: Critical Safety Item
- DAL: Development Assurance Level
- DD: Detailed Design
- EASA:
- FAA:
- FBL: Functional Baseline
- FBSM: Functional Baseline System Model
- FDAL: Function Development Assurance Level
- FH: Flight Hour
- FMECA: Failure Modes Effects & Criticality Analysis
- FTA: Fault Tree Analysis
- HMMP/R: Hazardous Material Management Program Plan/Report
- IDCR: Initial Design Concept Review
- IDFR: Initial Design Functional Review
- IDRR: Initial Design Requirements Review
- IPT: Integrated Product Team
- MBE: Model-Based Engineering
- MBSE: Model-Based Systems Engineering
- MOSA: Modular Open Systems Approach
- MRP: Military Rotorcraft Platform
- O&SHA: Operating & Support Hazard Analysis
- OMB: Operational Model Baseline
- PA: Product Assurance
- PBL: Product Baseline
- PD: Preliminary Design
- PDR: Preliminary Design Review
- PS: Product Support
- PSSA: Preliminary System Safety Assessment
- PSSCFA: Preliminary Software Safety Critical Functional Analysis
- RAC: Risk Assessment Code
- RAM: Reliability/Availability/Maintainability
- RWB: Reliability Workbench
- SE: Systems Engineering
- SFHA: System Functional Hazard Assessment
- SFR: System Functional Review
- SHA/SSHA: System/Subsystem Hazard Analysis
- SMS: Safety Management System
- SRHA: System Requirements Hazard Analysis
- SRR: System Requirements Review
- SS: System Safety
- SSPP: System Safety Program Plan
- STPA: System-Theoretic Process Analysis
- UCA: Undesirable Control Action
- WRR: Windchill Risk & Reliability

Not subject to U.S. Export Administration Regulations (EAR), (15 C.F.R. Parts 730-774) or U.S. International Traffic in Arms Regulations (ITAR), (22 C.F.R. Parts 120-130).
