Enhancing Industry 4.0 Transformation Success with a Solution Debt Playbook

2-6 July 2024

www.incose.org/symp2024 #INCOSEIS

Approved for Public Release

ManTech.
Securing the Future

The Digital Manufacturing
& Cybersecurity Institute

Key Points

Industry 4.0 success is a systems challenge

Solution debt is more holistic than technical debt

Managing solution debt can enhance Industry 4.0 transformation success

Industry 4.0 Definitions

- Synonymous with smart manufacturing; realization of the digital transformation of the field, delivering real-time decision making, enhanced productivity, flexibility and agility to revolutionize the way companies manufacture, improve and distribute their products.

Source: IBM, 2024

- The integration of intelligent digital technologies into manufacturing and industrial processes.

Source: SAP, 2024

Industry 4.0 Challenges

Need to modernize

“The organic industrial base was designed and really implemented in World War II, and so what we have is really a 20th century capability to support a 21st century Army and joint force.”

General Edward Daly, United States Army Materiel Command

Source: Judson, 2022

US Defense Industrial Base (DIB) is losing small suppliers

“Over the past decade, small businesses in the DIB shrunk by over 40%...if the DIB continues along the same trend, DoD could lose an additional 15,000 suppliers over the next 10 years.”

Source: US DoD, 2022

Manufacturing Industrial Base is Shrinking

2020 DATA

239,607 U.S. MANUFACTURING FIRMS

178,210 Small Manufacturers
< 20 Employees

57,373 Medium Manufacturers
20 < Employees < 500

4,024 Large
Manufacturers
>500 Employees

Source: US Census Bureau, 2020

2010 DATA

258,662 U.S. MANUFACTURING FIRMS

197,701 Small Manufacturers
< 20 Employees

57,512 Medium Manufacturers
20 < Employees < 500

3,449 Large
Manufacturers
>500 Employees

Source: US Census, 2010

Many Manufacturing Firms Not Resourced for Digital Transformation

THE THREAT FOR MANUFACTURING IS INCREASING

#1

In 2021, manufacturing was the top attacked industry, with ransomware accounting for 23% of the attacks

61%

of incidents at organizations with network connected operations technology (OT) were in the manufacturing industry

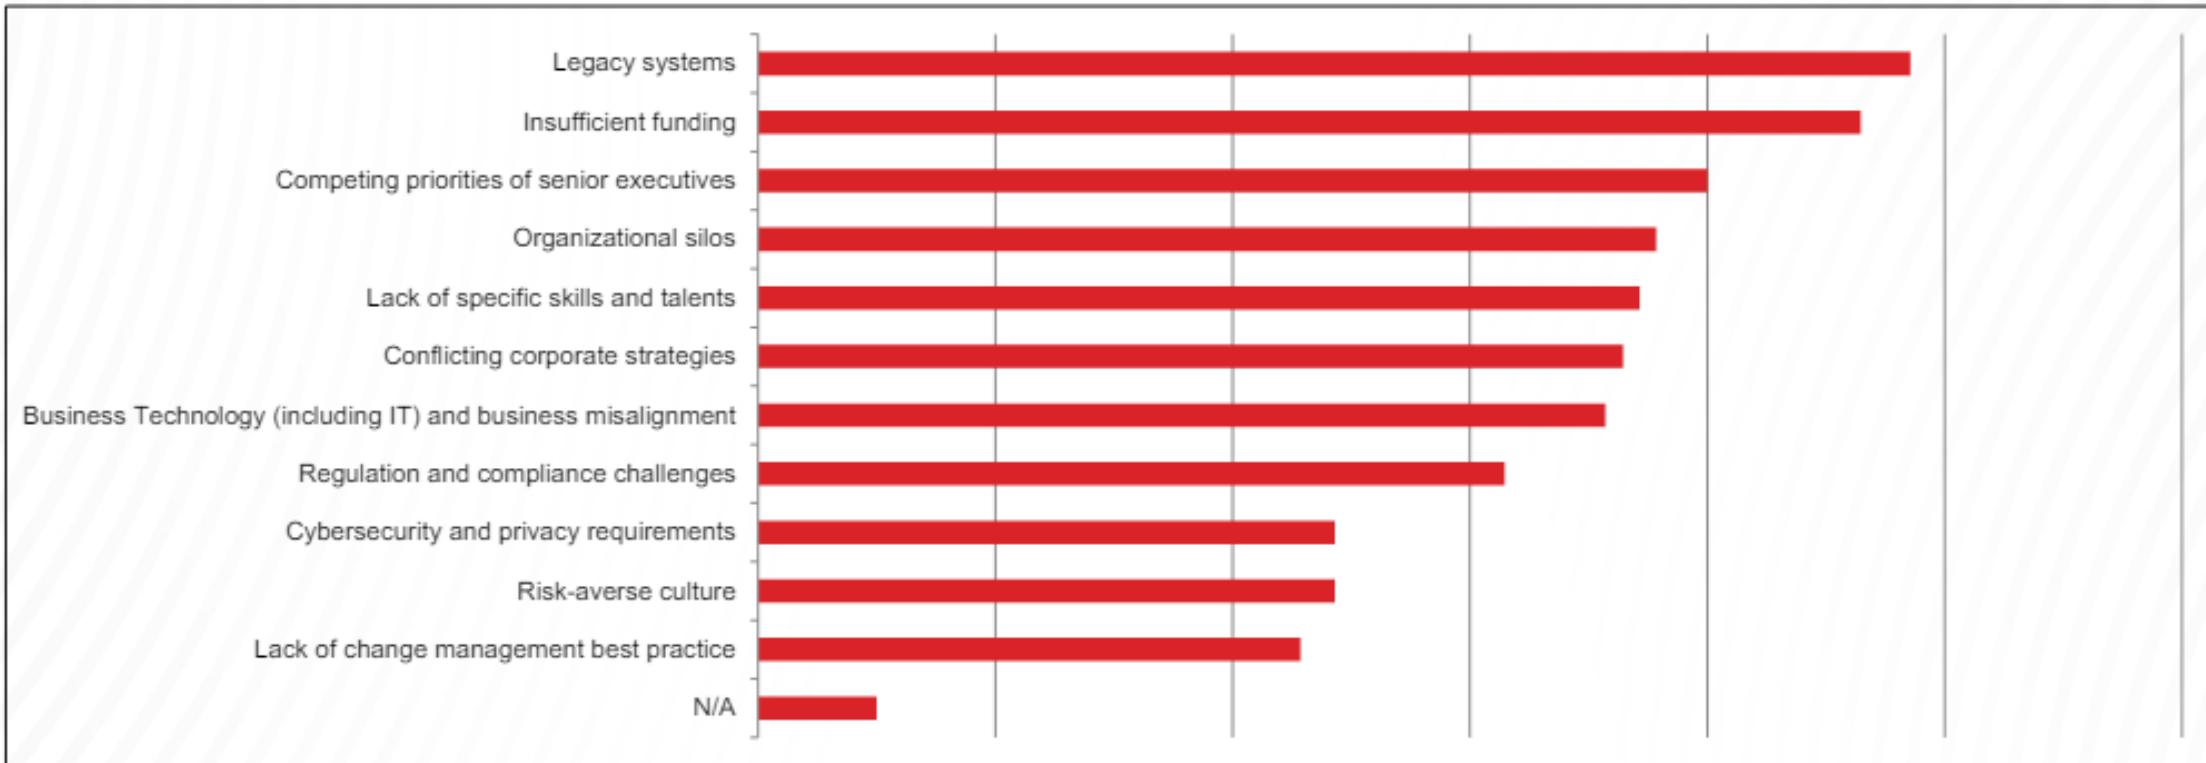

2,204%

increase in reconnaissance against industrial controlled operations technology and software accessible by the internet

Source: IBM, 2022

Cybersecurity is Part of the System

Obstacles to Digital Transformation

"There was a consistent thread across most respondents when it came to legacy systems, insufficient funding, and competing priorities of senior executives as challenges to better digital transformation successes. One could see the correlation between the three despite the order they were presented in. It was felt that in the business systems the ERP systems were expensive to implement and to upgrade without significant cost and disruption. Most respondents commented that they have several legacy systems and anticipate the maintenance of these and future systems to cause legacy issues on an ongoing basis."

Source: Reed, et al 2021 (FDA-funded study conducted by MxD and IAAE)

Key Points

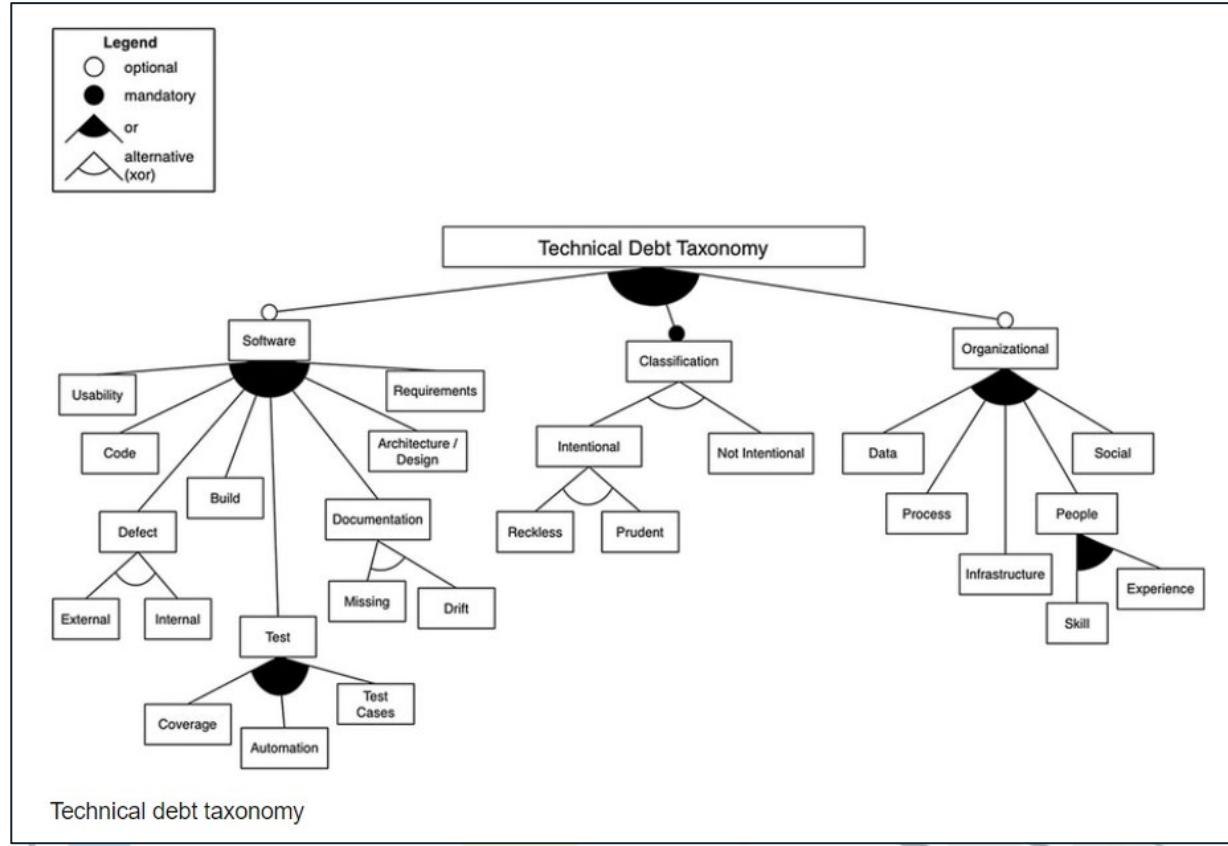

Industry 4.0 success is a systems challenge

Solution debt is more holistic than technical debt

Managing solution debt can enhance Industry 4.0 transformation success

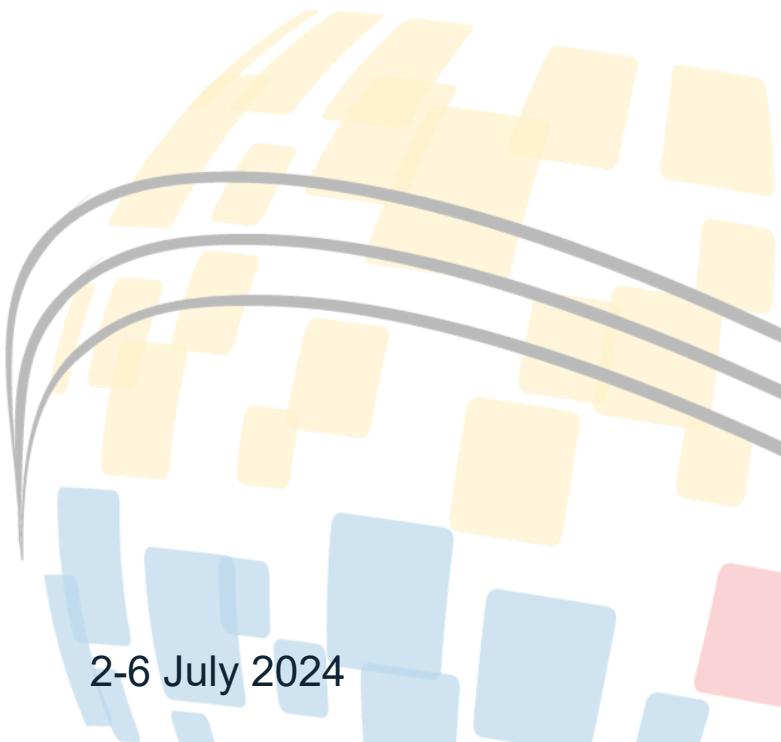

Technical Debt

- Debt – deferred payment due in the future
- Technical Debt – implied cost of additional rework caused by choosing a limited solution now instead of using a better approach that would take longer
- Technical debt literature is almost exclusively focused on software
- However, the debt metaphor is not just for software and is not limited to development phase

Sources: Codabux et al, 2017; Rouse, 2017; Mitton, 2023; Gartner Research, 2020

Common Causes

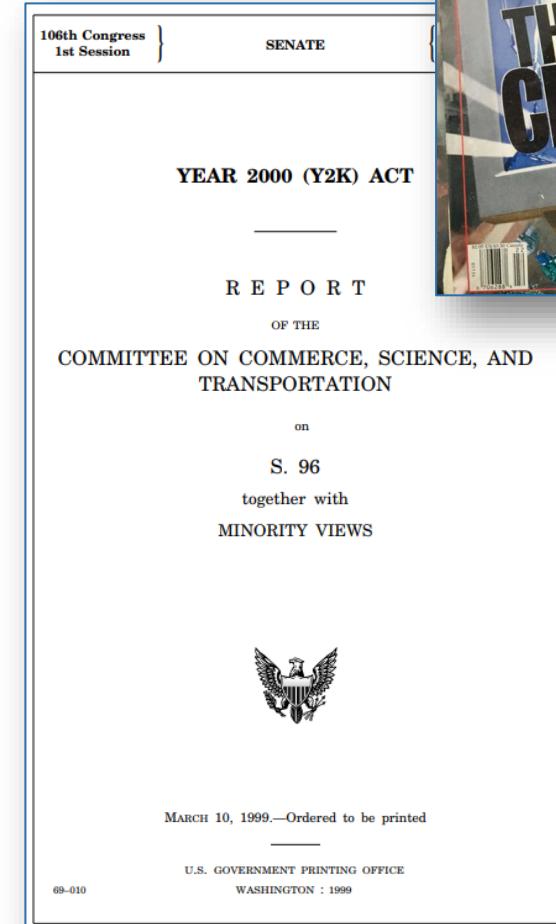

Sources: DoD, 2017; DoD, 2022; DoD 2024; Section 809 Panel, 2019; DAU, 2024; DIU, 2024; Engler, 2020; Frankiewicz and Tomas Chamorro-Premuzic, 2020; INCOSE 2021

Example: Y2K

- Estimates of up to \$1 Trillion spent in just the United States
- Estimates of \$8.5B spent by the federal government
- \$250M by Chase Manhattan Bank alone
- ...all because storage and processing used to be so precious most software stored only two digits of the year – even after that wasn't strictly necessary.
- This was brought up as a debt to be paid as far back as 1971

[#INCOSEIS](http://www.incose.org/symp2024)

Approved for Public Release

Solution Debt

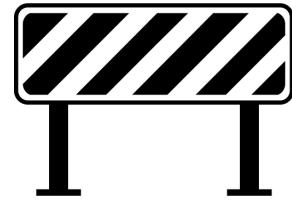

- Systems engineers worry about debt incurred at the solution level, spanning the lifecycle
- Broader term is Solution Debt
- Solution Debt – implied cost of additional rework across disciplines and lifecycle caused by choosing a limited solution now instead of using a better approach that would take longer
- Debt incurred during engineering may need payment during manufacturing

Solution Debt Taxonomy

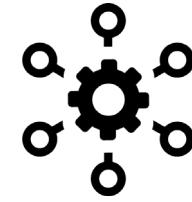

<table border="1"> <thead> <tr> <th></th><th style="text-align: center;">Debt</th><th style="text-align: center;">Common Symptoms</th></tr> </thead> </table>				Debt	Common Symptoms
	Debt	Common Symptoms			
Business Debt	Organization Debt	Management Debt	Inconsistent views of roles/responsibilities, Unchecked resistance to change		
		Supply Chain Debt	Reliance on single sources, Lack of visibility into supply sub-tiers		
		Service Debt	Ill-defined service level agreement, high service switching cost		
		People Debt	Poor workforce morale, Missing skills or experience		
		Social Debt	Strained interactions with stakeholders, Soiled reputation internally or externally		
	Approach Debt	Innovation Debt	Lack of differentiating capability, Unbalanced R&D portfolio, Misapplied skills		
		Process Debt	Inefficient process, Undocumented process, Rigid process		
		Infrastructure Debt	Insufficient facilities or equipment, Lack of internal/external collaboration capability		
	Development Debt	Requirement Debt	Unverifiable requirements, Incomplete traceability, Requirement Quality Issues		
		Architecture Debt	Unintended system behavior, Lack of variation management, Incomplete architecture, Lack of or incomplete traceability, lack of interoperability		
		Design Debt	Design for export not considered, Lack of design guidance, Multiple sources of truth		
		Technical Data Package Debt	Incomplete specification, Inconsistent model methods and style		
		Security Debt	Limited cyber recovery planning, Conflicting classification guides		
		User Interface Debt	Unnecessary cognitive load on user, Lack of reliable interpretation		
		Build & Validation Debt	Lack of automated validation suite, Ill-defined dependencies		
		Code Debt	Duplicate code, Poor code metrics, Unmaintainable code, Inefficient code		
	Sustainment Debt	Production Operation	Uncharacterized value streams, Inability to meet contracted volumes, Unvalidated requirements		
		Defect Debt	Unmanaged backlog, Uncorrected major defects		
		Test Debt	Lack of control and observability points, Unrepeatable test results		
		Technology Debt	Ad-hoc technology adoption, Solution no longer effective in intended environment		
		Obsolescence Debt	Surprise lifetime buys, Obsolete inventory		
		Data Debt	Ad-hoc data controls, No data disposal plan, Dark data		
		End of Life Debt	Lack of plan for removal from service		

Evaluating Debt

Impact

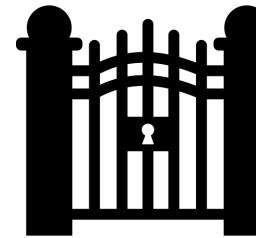

Fix Cost

Contagion

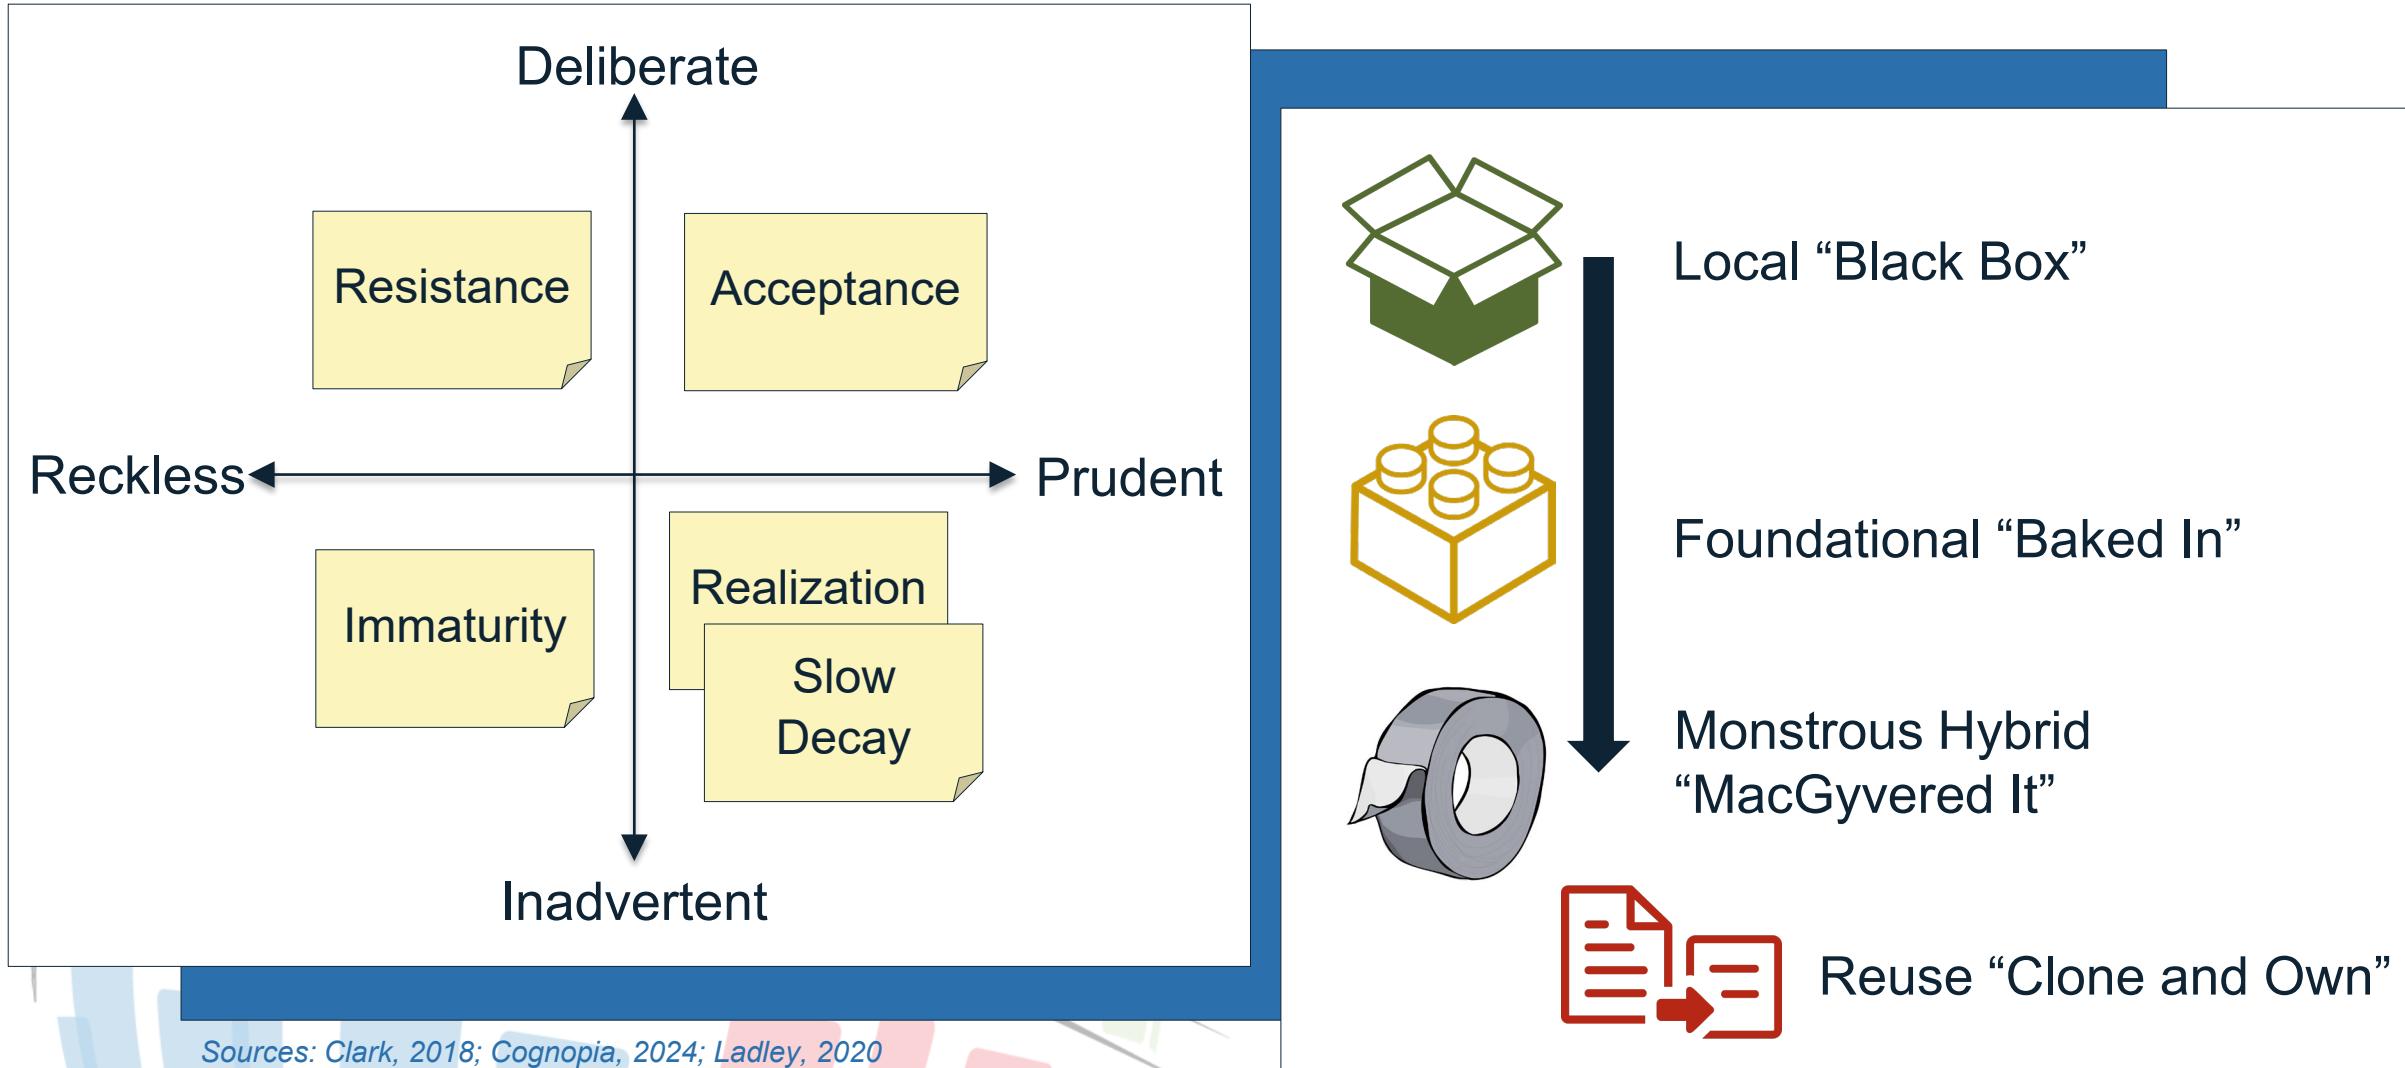

Who pays?
(Directly, Indirectly)

Access Denied?
(No ability to impact)

Sources: Cognopia, 2024; Clark, 2018

Common Types of Debt

Example: Legacy Equipment

Legacy factory equipment can still be highly productive

However, it poses unique challenges to a digital enterprise that desires real-time production data to justify capital expenditures or inform process improvements

Keep it?
Replace it?
Retrofit it?

New Equipment Solves Some Problems, but Understand Debt

Keep It

Type	Observation
Management Debt	
Supply Chain Debt	
Innovation Debt	
Infrastructure Debt	Limited remaining useful life
People Debt	Have artisan; artisan required
Process Debt	Process understood
Service Debt	
Social Debt	
Production Operation	Well-understood performance
Architecture Debt	
Technical Data Package Debt	
Security Debt	Not connected
Obsolescence Debt	Limited access to repair parts
Design Debt	
User Interface Debt	
Requirement Debt	
Code Debt	
Defect Debt	
Test Debt	
Technology Debt	
Build & Validation Debt	
Data Debt	Lack of real-time data
End of Life Debt	Decommission plan

Replace It

Type	Observation
Management Debt	
Supply Chain Debt	
Innovation Debt	
Infrastructure Debt	Extensive remaining useful life
People Debt	Training required; lower bar
Process Debt	New processes and/or roles
Service Debt	
Social Debt	
Production Operation	Must characterize performance
Architecture Debt	
Technical Data Package Debt	
Security Debt	Increased attack surface
Obsolescence Debt	Warrantied and supported
Design Debt	
User Interface Debt	
Requirement Debt	
Code Debt	
Defect Debt	
Test Debt	
Technology Debt	
Build & Validation Debt	
Data Debt	Have data, but now what?
End of Life Debt	Must create a plan

Mitigates debt

Incurs debt

Key Points

Industry 4.0 success is a systems challenge

Solution debt is more holistic than technical debt

Managing solution debt can enhance Industry 4.0 transformation success

Solution Debt Playbook

2-6 July 2024

www.incose.org/symp2024 #INCOSEIS

Approved for Public Release

Table of Contents

Overview of solution debt

- Traditional definitions
- Common causes
- Solution debt taxonomy with definitions
- Program risk management vs. solution debt

Step 1: Identify current debt

- Identify current program debt
- Characterize debt type

Step 2: Evaluate debt

- Assess impact
- Assess fix cost
- Assess contagion factor
- Assess source and recipient of debt
- Assess who pays / who benefits
- Assess ability to impact
- Determine quadrant for improvement
- Determine structural context

Step 3: Link to program assets

- Link evaluated debt to program and enterprise risks
- Link evaluated debt to guardrails

Step 4: Develop debt reduction plan

- Develop debt reduction activities
- Assess timeline and resourcing
- Document debt reduction plan

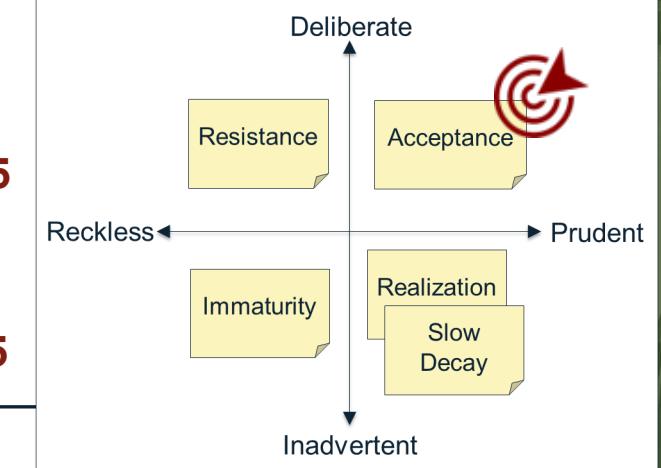

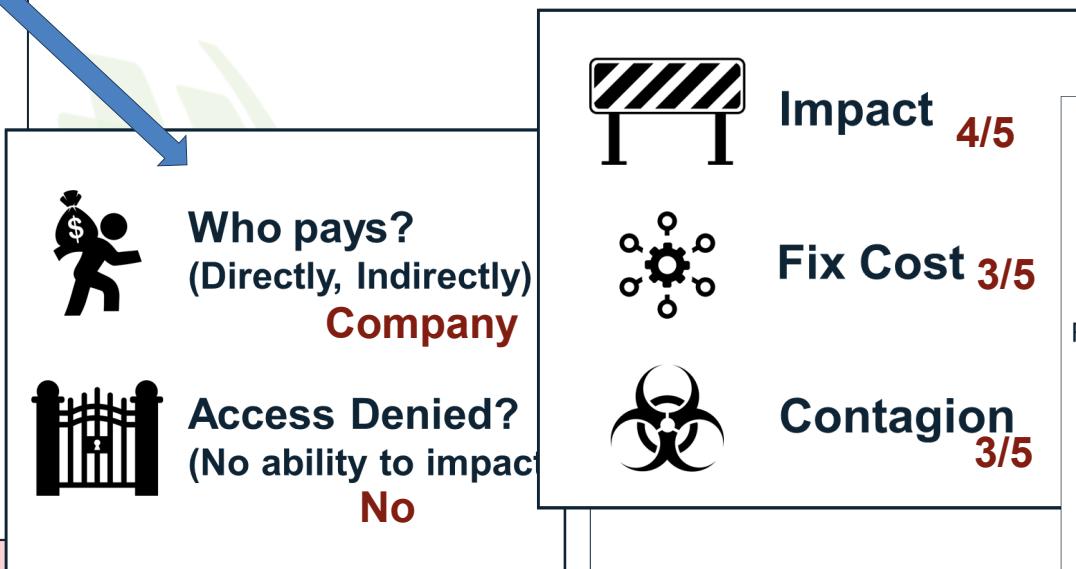

Step 5: Execute the debt reduction plan

- Program and enterprise metrics
- P-D-C-A Cycle

Using Solution Debt Playbook for "Replace It"

Step 1: Identify current debt	Identify current program debt Characterize debt type
Step 2: Evaluate debt	Assess impact Assess fix cost Assess contagion factor Assess source and recipient of debt Assess who pays / who benefits Assess ability to impact Determine quadrant for improvement Determine structural context
Step 3: Link to program assets	Link evaluated debt to program and enterprise risks Link evaluated debt to guardrails
Step 4: Develop debt reduction plan	Develop debt reduction activities Assess timeline and resourcing Document debt reduction plan
Step 5: Execute the debt reduction plan	Program and enterprise metrics P-D-C-A Cycle

Type	Observation
Infrastructure Debt	Extensive remaining useful life
People Debt	Training required; lower bar
Process Debt	New processes and/or roles
Production Operation	Must characterize performance
Security Debt	Increased attack surface
Obsolescence Debt	Warranted and supported
Data Debt	Have data, but now what?
End of Life Debt	Must create a plan

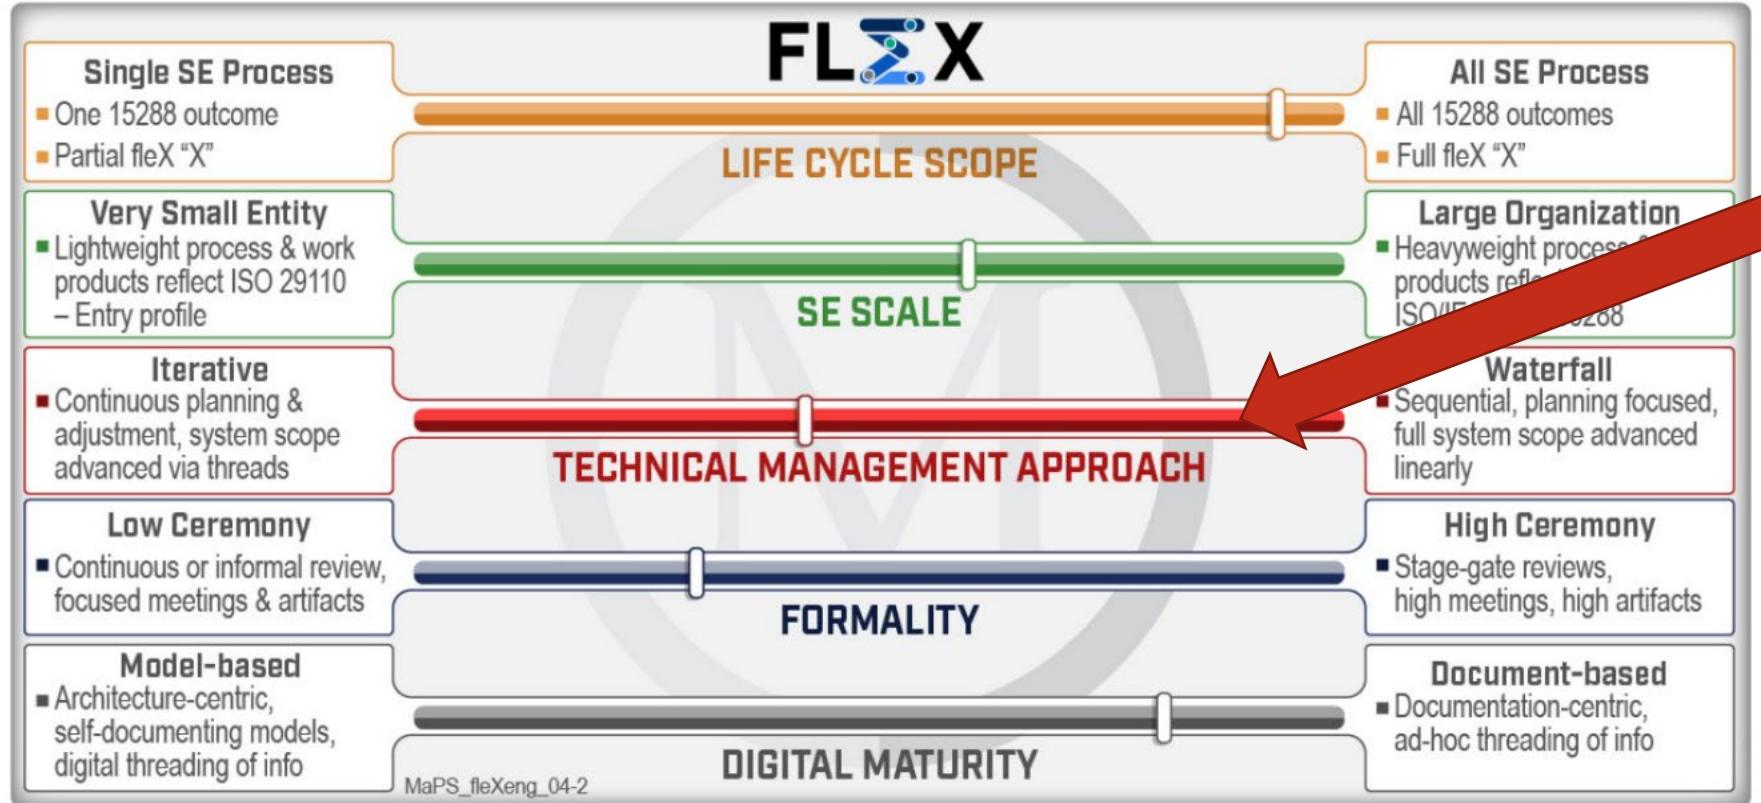

Solution Debt Management – Matrix

Solution Debt Matrix

Source	Debt Type	Observation	Impact	Fix Cost (\$K)	Contagion Factor	Who Pays	Access	Quadrant	Risk Link	Guardrail Link	Reduction Plan
Machine XYZ Replacement	Process Debt	New process and roles	3	\$250	3	Company	Yes	1			
Machine XYZ Replacement	Security Debt	Increased attack surface	2	\$500	4	Company	Yes	1			
Machine XYZ Replacement	End of Life Debt	Must create a plan	3	\$50	1	Company	Yes	4			
Machine XYZ Replacement	People Debt	Training required	4	\$100	2	Company	Yes	1			
Machine XYZ Replacement	Data Debt	Determine handling of new data	5	\$250	5	Company	Yes	1			
PLC 123 Upgrade	Process Debt	New process and roles	3	\$20	3	Company	Yes	2			
PLC 123 Upgrade	People Debt	Training required	4	\$120	2	Company	Yes	1			
PLC 123 Upgrade	Security Debt	Increased attack surface	2	\$400	4	Company	Yes	3			

Solution Debt Matrix Tracks Playbook Information

Solution Debt Management Implementation Example for flex-engineering®

Solution debt integrated in technical management approach

Example Embedding Solution Debt in Process Definition

Solution Debt Management Implementation Example for Scaled Agile Framework (SAFe)

The image shows two screenshots of a process management tool. The left screenshot displays the 'Team Backlog Refinement' workflow, which includes activities like 'Analyse and Detail Stories and Team Features' and 'Estimate and Prioritize Stories and Team Features'. A red arrow points from this workflow to a callout box that reads: 'For SAFe, Utilize Solution Debt Matrix in Backlog Refinement'. The right screenshot shows the 'SAFe Scrum' workflow, which includes 'Iteration Planning' as a key step. A red arrow points from the 'Iteration Planning' step in the SAFe Scrum workflow to the 'Solution Debt Matrix' section in the backlog refinement callout.

For SAFe, Utilize Solution Debt Matrix in Backlog Refinement

Solution Debt Management Implementation, Example for Predictive Project Management

> **methodpark**
by UL Solutions

> **stages**

For Predictive PM, Utilize Solution Debt Matrix in Risk Management

Solution Debt Management Aids Industry 4.0

- Holistic characterization of debt
- Structure to systematically address solution debt
- Solution debt resolution embedded in execution

Active Management of Solution Debt Can Aid Industry 4.0 Transformation

Key Points

Industry 4.0 success is a systems challenge

Solution debt is more holistic than technical debt

Managing solution debt can enhance Industry 4.0 transformation success

Call to Action: Consider Managing Solution Debt in System Development
